

ALZO SPEEDLITE LOCATION KIT - USAGE

Example of the ALZO PORTA-FLASH 2 LIGHT LOCATION KIT used with an ALZO FLIP FLASH® BRACKET SOFTBOX KIT

1 UMBRELLA PORTA-FLASH "KEY LIGHT" LEFT
 1 UMBRELLA PORTA-FLASH "BACKGROUND LIGHT" RIGHT
 1 ALZO FLIP FLASH® BRACKET SOFTBOX KIT "FRONT FILL"

The ALZO porta-flash 2 light location kit was used for KEY and BACK lights. A third FRONT FILL flash light was mounted on an ALZO Flip Flash® Bracket with a mini-softbox attached. This FRONT FILL could have been an umbrella light instead of the softbox.

The lights were set to have a strong side KEY light to the left of the subjects, this was to simulate natural window light on the subjects.

The key light was set to f 5.6 and the fill and back light were set 2 f-stops under the KEY light. The camera ISO was set to 200. The test histogram indicated excellent exposure with no highlight clipping.

The BACK light was rotated to cast most of its light on the back wall and some on the subjects. The room lights were off and a small amount of daylight can be seen in the window.
