

Please follow the instructions below to insure correct assembly of your new table.

LEG ASSEMBLY

Please note: Some leg heights come already assembled. If yours are, move on to Table Assembly

STEP 1: Locate the CAM Screw and screw it into 1 side of the leg either by hand or using a Phillips head screw driver.

STEP 2: Slide the middle piece of the leg (shorter piece with dowels on each end) onto the leg as shown to the right. Please note the orientation of the middle piece. The rounded edge should face out and the inside of the middle piece will match the inside of the leg. (The outside of the leg has a recess for the bolts when attaching the leg to the table top). Using a CAM Nut, insert it into the cavity in the middle piece and turn using a Phillips head screw driver to tighten down. PLEASE NOTE: Do Not Overtighten. Stop turning once snug.

STEP 3: Repeat STEP 2 for the other side of the leg.

STEP 4: Your completed leg should look like the photo below.

Inside of Leg

Outside of Leg

STEP 5: Repeat steps 1-4 for the 2nd leg.

TABLE ASSEMBLY

Step 1: Start by attaching 1 of the 2 legs to the table platform. Make sure to line the holes up. Only screw in the bolts half way. Once all bolts of 1 leg are in half way, finish screwing them in but leave them loose. **DO NOT** tighten them down in this step. ****If your table comes with the Storage Add-On, be sure to use the 2 shorter bolts for attaching the first leg.**

Please note: If you feel any strong resistance while screwing in the bolts, back them out and try again, making sure the holes are lined up properly they are going in easily.

Step 2: Repeat Step 1 for the 2nd side. If your table has the Storage Add-On, attach the 2nd leg and the Add-On at the same time using the 2 longer bolts.

Step 3: With the bolts all the way in, but still loose. Set the table flat on its legs in the position your child will be playing with it. Then tighten down on the bolts. Be careful to **NOT** over tighten. They just need to be snug.

Step 4: Enjoy!
