  - Increase Wattage
  - Micro USB Charging Port

Turning On and Off

Quickly press the Power Button five times to turn On or Off; if done correctly the LED Display will either display if turning on or become blank if turning off.

If the device is Off; the LED Display will not display any information when you press the power button.

If the device is On; the LED Display will display the device status and begin vaporising when you press the power button.

If the device does not turn on, try recharging the device.

Inhaling

With the device turned on and filled with e-liquid, press and hold the Power Button while inhaling from the mouthpiece.

While you are holding the button, you will hear a sizzling sound and the LED Display will show a counter where the Watts are normally displayed.

If this does not occur, try turning on the device or recharging.

Changing Watts

The current Wattage (W) is shown on the LED Display. You can change the Wattage on the Mod/Battery by pressing the buttons shown in the diagram. This will then update the Watts (W) on the LED display.

Decrease Wattage
Increase Wattage

Adjusting Airflow

On the tank top, adjust the airflow ring clockwise to increase airflow and clounter clockwise to decrease airflow. The size of the hole indicates the airflow.

Watts vs Airflow

The Wattage and Airflow settings will directly affect your experience with the device. If this is your first vaporiser we recommend you start at a lower setting such as 10W and set the Airflow to half.

You will then need to adjust the Wattage and Airflow till you reach a setting that is best for you.

Filling with E-liquid

1. Make sure the device is turned off then unscrew the Tank Top.

2. Fill with e-liquid along the glass wall of the tank. Make sure to avoid the centre of the coil.
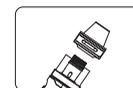

3. Reattach the Tank Top.

4. If this is the first time you have filled the tank or you have just installed a new coil, then you must wait 5 minutes before using the device.

Not doing so will burn the coil, which will cause a burnt flavour when vaping. If the coil is burnt then it will need to be replaced.

Changing the Coil

You should change the coil if:
a) the flavour starts to change or tastes bad
b) there is a burnt taste
c) drops of e-liquid enter your mouth when inhaling

1. Make sure the device is turned off then unscrew the Tank Top and empty it of any remaining e-liquid.

2. Unscrew the old coil and remove it for disposal.

3. Screw in the new coil, then reattach the Tank Top.

4. Fill the tank using the instructions in "Filling with E-liquid". Once the tank has been filled, you must wait 5 minutes before using the device.
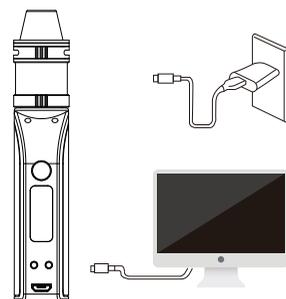

Recharging

The battery indicator is shown on the LED Display.

You can recharge the device either by connecting the Micro USB Charging Port to either your computer or a high quality certified 5V 2A USB wall charger.

To maintain the life of the battery, make sure you recharge it when the battery indicator is 1-2 bars.

Warning
Never charge a damaged or dropped battery
Do not overcharge. Remove from charger when complete
Never leave the battery unattended when charging
Only ever use a certified USB cable and wall charger

Safety Information

1. This is a sensitive electronic product, keep it from colliding with other items or from drops, throws or any other mishandling. Do not overcharge the battery. Keep the device away from excessive heat.

   Any of these actions can damage the battery within the mod and could cause the battery to leak, burn or explode. If you suspect that the battery has been damaged we recommend that you dispose of the product immediately.

2. The device and its components must be kept out of reach of children and pets. The small parts are a choking hazard and all components must be disposed of properly.

3. Do not attempt to repair the device, including the battery, by yourself as damage or personal injury may occur.

4. The device is not waterproof, keep it dry at all times.

5. When not in use, turn off the battery/mod. If not in use for an extended period of time, disconnect the atomiser/tank from the battery/mod.

Warranty

VapeStix provides a limited 90 day warranty for Vapestix products purchased in original VapeStix packaging from VapeStix or its authorised resellers.

To obtain warranty service and support, please email support@vapestix.com.au

A valid proof of purchase that includes the name of the device and the date purchased may be requested.

You will be required to return the device to an address that will be provided.

This warranty does not cover:

1) products purchased from an unauthorised reseller

2) damage caused by:
(a) accident, fire, misuse, neglect, unusual physical or electrical stress, modification or attempted repair
(b) use of the product outside VapeStix published guidelines

3) consumable spare parts and accessories (unless they are found to be non-functional or broken upon purchase of product), such as tanks, coils, cables or cases

Issues and FAQ

Q: When inhaling, there no vapour or "E 10" appears on the LED Display.

A: Make sure:
   a) The tank is well connected to the Mod/Battery
   b) The coil is screwed in correctly to the tank base
   c) The tank is not empty of e-liquid

Q: When inhaling, there is a burnt taste

A: Change the coil. Also, if you have operated the device without e-liquid in the tank the coil will be burnt and need to be replaced early.

Q: Cleaning the tank or the tank is leaking

A: Often leaking is caused by e-liquid in the seal of the tank so clean the tank and seal by following these steps:

Step 1   Disassemble the tank into at least three parts.
Step 2   Unscrew and discard the used coil.
Step 3   Soak the tank parts in warm soapy water, then rinse with clean water.
Step 4   Soak the tank parts with isopropyl alcohol, then rinse with water; ensuring there is no residue.
Step 5   Let it air dry, then install the new coil and reassemble.

Q: When inhaling, there is no vapour and an "E 13" appears on the LED Display.

A: The device has overheated due to overuse, please wait till the device cools down.

Warning:

This product is not to be used by people under 18 years or those that are pregnant or breastfeeding.

Please check with you doctor if you have any medical conditions or are at risk of conditions that may prevent you from using this product such as heart disease, high blood pressure, diabetes, depression, asthma, etc.

This device is only to be used with high quality e-liquid. Please check the label of the e-liquid that you choose to use for directions, ingredients or any warnings. Ingestion of the non-vaporised concentrated e-liquid ingredients can be poisonous.

This product is not intended for use as a smoking cessation device.

This product may be used with e-liquids that contain nicotine, which is addictive and habit forming, and can be toxic by; inhalation, if swallowed or by contact with skin or eyes.

Keep this device and any e-liquid you have purchased away from children or pets.
