

# SMART Metered Dose Applicator - Accuracy Study

BIOSRX

## Accuracy and Reproducibility Study

For this study, flowable transdermal composition<sup>1</sup> was transferred to the Ticker™ applicator, packaged and labeled, then allowed to settle overnight in order to eliminate air pockets. On the day of the study, each applicator unit was tapped for 30 seconds to further remove air pockets, and a visual test was conducted to confirm removal.

- ◆ Priming: 4g of composition expelled, (80 CLICKS).
- ◆ All applicator units were filled with composition to the max; ~37g
- ◆ Data Collection: November 12-17, 2012
- ◆ Calibrated Balance Used: OHAUS® Adventurer Pro
- ◆ Volumetric Output Measured in weight as grams (g)

## Accuracy and Precision Study

For this study, flowable transdermal composition<sup>1</sup> was transferred to the Ticker® applicator, packaged and labeled, then allowed to settle overnight in order to eliminate air pockets. On the day of the study, each applicator unit was tapped for 30 seconds to further remove air pockets, and a visual test was conducted to confirm removal. After each dosage (5 CLICKS) was dialed, a 10-second interval was introduced prior to collecting the following sample.

- ◆ Priming: 4g of composition expelled, (80 CLICKS).
- ◆ All applicator units were filled with composition to the max; ~37g
- ◆ Data Collection: August 11, 2016
- ◆ Calibrated Balance Used: OHAUS® Adventurer Pro
- ◆ Volumetric Output Measured in weight as grams (g)
- ◆ Base Examined: Transderma HRT Base Flowable
