

Vacuum oil to save oil with 2,2 kw threephase power

Collect cutting oil or coolant mixed with metal chips or other swarfs, separate liquids from solids and re-use the filtered liquid!

Regular use of the Oil industrial vacuums not only performs maintenance of the machine tools but also means great economic savings. Faster cleaning of the CNC machines, reuse of the emulsions or coolants avoiding any waste. The functioning is easy: the solid chips are collected into a basket while liquids are collected into the main container and then re-introduced into the machine tool thanks to the dedicated gun.

PRODUCT FACTS

- Recycling of emulsions
- Reducing machine downtime
- Prolonging the lifetime of the machine tools
