STICK ON WHITEBOARD APPLICATION PROCESS

Video Tutorial

CAREFULLY READ ALL LITERATURE & WATCH THE INSTRUCTIONAL VIDEO

STEP 1

Download any Free "QR Scanner" App to your smart phone.

STEP 2

Open the Free QR scanner App and focus the camera on this QR code.

STEP 3

Play the instructional video & transform your walls!

INSTALLATION

1. You will need a partner to assist with installation. Don't worry, you can let them use your WhiteyBoard as compensation. Please designate a "holder" and a "smoother".
2. Use a straight edge/level and pencil to draw horizontal & vertical reference marks to ensure proper alignment. Remove all dust and debris from the wall you have chosen for your WriteyBoard. Now remove your WriteyBoard from it's awesome tubular dwelling.
3. Remove the tape and unroll 1-2 feet of your WriteyBoard, tape the corners in place, . **Figure 1**
4. Proceed unrolling until you have released approximately half of the WriteyBoard. For WriteyBoard sizes longer than 6ft, use additional tape to secure the board in place.
5. Once the WriteyBoard is unrolled about halfway, apply a long piece of masking tape running from the top down to the bottom, splitting the WriteyBoard in half. **Figure 2**
6. Next, unroll the entirety of your WriteyBoard and tape the remaining corners. Stand back and admire the awesomeness about to take place (if crooked make the proper adjustments). **Figure 3**

figure 3

7. The "holder" will remove the tape from either side, then gently pull the end of the WriteyBoard vinyl back while the "smoother" simultaneously peels back the protective paper. **Figure 4**
8. The "smoother" peels back the protective paper all the way to the masking tape down the middle of the writeyboard. Then the "smoother" will cut or tear away the protective paper backing. **Figure 5**
9. The "holder" (**h**) will bring the WriteyBoard back to it's taped position, maintaining a slight distance from the wall. The "smoother" (**s**) will then smooth the material onto the surface starting from the middle. **Figure 6**
10. Using a microfiber cloth slowly, yet forcefully smooth up and down towards the holder at the end of the WriteyBoard. **FIG 6**
11. Once you have successfully adhered one half, remove the middle tape and repeat the same procedure on the other half.
12. Use the provided squeegee tool to really iron down the material and release any remaining trapped air.
