

XLR ANNOUNCES THE RELEASE OF THE ENVY™ RIFLE CHASSIS SYSTEM

The highly anticipated ENVY™ offers a winning blend of features, function, and durability. It was designed specifically for those shooters who desire professional level precision.

Grand Junction, CO. – August 1, 2017.

XLR, a leading U.S. manufacturer of custom rifle chassis and components, is proud to announce the release of the ENVY™ precision rifle chassis. The feature-rich ENVY™ was developed from the ground up through years of cooperation with some of the best shooters in the world.

The ENVY™ rifle chassis has a base weight of 35 oz (without buttstock or grip) and will initially be available for the Remington 700 short action and clones. The sleek, one-piece design is constructed from rigid 6061-T6 aluminum for an ultimate balance of lightness and durability. A multi-point radial cut inlet allows the receiver to sit in the chassis stress-free for the utmost in accuracy (no V-block). As with all XLR chassis, the ENVY™ is a direct bolt-on application with no gunsmithing or setup required by the user.

Unique to the ENVY™ is the integrated, Arca-Swiss™ style, 1.5" dovetail mount on the forend. This allows the chassis to be used with a camera tripod. Having the mount integrated ensures that it will never come loose during strings of fire. It also allows for a longer dovetail than a traditional bolt-on adapter would,

which provides for more versatility in balancing the rifle by sliding it forward and aft.

The integrated detachable magazine system allows the use of AICS style magazines. A new style of magwell features a larger, tapered opening for faster magazine changes and has an angled, serrated face that can serve as a barricade stop. In addition, the ENVY™ also features an integrated 5.5" picatinny rail located on the bottom of the handguard as well as five strategically placed QD sling sockets. An integrated bubble level keeps cant issues in check. The M-LOK™ compatible handguard allows the shooter the option to custom-tailor the chassis with M-LOK™ accessories.

“What we have put together is the perfect package for your competitive, PRS style shooter,” said Matt Means, Sales Manager for XLR. The ENVY™ has more integrated components than any other chassis in its class. This highly anticipated product release will satisfy the needs of anyone seeking a durable and highly adaptable rifle chassis. The ENVY™ will of course come with our lifetime warranty.”

The basic ENVY™ package is priced at \$740 with many upgrades and options available. The ENVY™ is available now on the company's official online store at www.xlrindustries.com.

Unique to the ENVY™ is the integrated, Arca-Swiss™ style, 1.5" dovetail mount on the forend.
