C5.	OPERATION BUTTON
C6.	AERATING MODES

THE SCIENCE

For optimal flavor wine needs to age prior to being enjoyed. Aging can happen over time in the bottle or rapidly by being exposed to oxygen. The Eparé Pocket Wine Aerator rapidly exposes wine to oxygen, enhancing its flavor. Typically this can be achieved by using a decanter or swirling wine in a glass - this method takes some time. With the Eparé Aerator it takes seconds. Not all wines will benefit from this kind of aeration as older wines would have already achieved this process in the bottle. Our aerator is designed for the everyday wine and works best with young reds, select whites, heavy ports, or to test the aging potential of a select bottle.

AERATOR USE

To setup the aerator first remove the bottom cap (A) using the lip for ease, then remove the rod (B) from the bottom of the aerator (C) and insert the rod into the outlet (C2) with the open end in. Rest the aerator onto your wine glass and press the button (C5) to cycle into the proper mode.

AERATOR MODES

The Eparé Pocket Wine Aerator is pre-programmed with 3 modes: White, Red, and Port. The modes are associated with the operating time interval: 15, 30, and 45 seconds respectively. Switching between modes is achieved by pressing the button (C5): 1 press- White, 2 presses- Red, 3 presses- Port, 4 presses- OFF. The modes are programmed so that the total aerating time is consistent to the mode interval regardless of the pause between button presses.

BATTERY INSTALLATION

The Eparé Pocket Wine Aerator comes with 2 AAA batteries already installed. In order to create contact you need to remove the safety strip located on the corner of the cap (C1). If you have the need to change the batteries than a small Phillips head screw driver is required to remove the screw holding the cap (C1) in place.

CLEANING AND CARE

Rinse the aerating rod in warm soapy water prior to storage. Alternatively you may clean the rod by operating in a glass of water in between uses.

CAUTION

Do not use different types of batteries together. Do not mix old and new batteries. Always remove exhausted batteries and dispose of safely. Clean battery contacts and also those of the device prior to battery installation. Always dispose of batteries properly. Keep fingers clear when attaching cover.
