

Instructions on How To Operate the Warm White Globe Light

Simply remove the Globe Light from the blister pack. You will need 3 AAA Batteries to operate your new Globe Light.

Holding the Globe Light as indicated in the image on the left, unscrew the battery cap to reveal the battery compartment.

Insert your three AAA Batteries, best to use long life batteries.

When replacing the battery compartment, make sure that the two pins line up with the metal points inside the globe. The metal strip on the side of the battery compartment must line up with the groove inside of the Globe Light.

Make sure that you twist the cap back on firmly in order to make the Globe Light watertight. Push the red button to switch on the brightest light, push it again for a dimmer light or push it again for a flashing light. Great for parties.
