

## HOW TO CORRECTLY IDENTIFY YOUR NIEZGODKA VALVE

On Niezgodka Safety and Relief valves, although it is useful to have the details from the valve label, the only way to be certain you get the exact same valve is with the serial number. The serial number is in the format of a letter followed by 5 numbers i.e. F15703. On screwed valves it is usually stamped on the inlet nut or for very small valves, on the valve body itself. For flanged valves it is usually stamped on the outlet flange.
