### Flowstar / Bonomi Actuated Process Valve Link-up

Flowstar have been given the opportunity through a new regional agreement to develop our involvement in the Process Valve and Actuation sector.

In partnership with Bonomi (UK) Ltd, we are able to provide Actuation packages from single valves through to complete project requirements.

Our focus will be on 90 Degree quarter turn Valves - primarily Ball and Butterfly, driven by Pneumatic and Electric Actuators. All relevant accessories such as Solenoids, Switch-boxes and positioners can be added to complete all actuated requirements. Manually Operated Ball and Butterfly Valves can also be supplied.

All Bonomi products are Italian manufactured and deliver the quality standards our customers have come to rely on. One extra benefit for our customers being UK stocks which will guarantee speedy deliveries.

Actuated valves will be supplied assembled, tested and with full technical supporting documentation if requested.

Both Bonomi and Flowstar are excited about the opportunities the new link-up will generate.

### New Premises under construction....

Over the last 10 years, Flowstar's business has grown by more than three times.

We have now reached a point where we are at the capacity of our current premises and have therefore bought a new much larger site nearby.

We are currently redeveloping it and expect to move in around October this year.

It will give us around three times the capacity of our current site.

This will allow us to stock even more great products for next day delivery (Watch this space).

Exciting times ahead!
