

## How to Easily Change Your Lenses

You will need to bend the lenses to remove them and replace them.

*Don't worry, the lenses won't break!*

They're made of unbreakable polycarbonate.

The simple steps below will make it easy to exchange your lenses every time.

### To Remove

Pull the lens bending it outward and away from the center piece.

### To Install

Place the lens into the temple end of the frame. Bend the lens under the center piece as shown in the picture above.
