INSTRUCTIONS FOR THE WIFI APP (EH220)

Note: We integrate with a 3rd party to offer the WiFi function. The feature isn't recommended though due to its limited range.

SETUP:

1. Search "RoadCam" in the app store or download and install the APK for Android devices from here.
2. Hold the "Fn" button to activate WiFi on the EH220.
3. Open the RoadCam app and tap to search for the WiFi signal. You should see something similar to *"amba_boss-".* This will be the SSID of your EH220.
4. Enter the WiFi password which is 1234567890 as default and tap "Add" to connect your body camera.

OPERATION:

1. Tap the orange "Record" button to start recording.
2. Tap the camera icon to switch to snapshot view and press "Take Photo" to take a snapshot.
3. Review your footage by pressing "Recorded Video" or "Picture"
4. To playback video, hold the video and press "Download"

NOTES:

1. The internal WiFi module is limited to an 8m radius.
2. You can start/stop recording remotely from the app.
3. The Fn button has many features depending on how you press it, such as manually turning on infrared and turning on/off WiFi.
