

Snake Plant Moonshine

Dracaena trifasciata 'Moonshine'

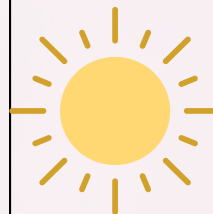

The Moonshine is an attractive variety of snake plant (or Sansevieria, the old botanical name for them) with mostly-uniformly light green leaves.

When they're happy, they will stand up straight and tall - and push out baby plants to fill out the pot!

Watering

Water when completely dry!

Lighting

Any lighting will work, but bright is best!

I'm mildly toxic when ingested.
