

Dwarf Signals (**8001** and **8002**) tell it all...individually placed, you can be sure that the switch was thrown as seen clear across your whole layout. Or, you are an Engineer and you want the status of a clear switch or not switched track, no matter what track or direction you are running. You would want the **8010 set** of 3 Dwarfs, **2-8001s** and **1-8002** for the side track. See below, the LEFT Switch application *example* using the **DZ1000 Switch** and **DX1002 push button control switch**. State 1 shows the switch running on a main line (*example only*). The curved siding is **Red** (8002) and the straight main line with **2-8001s** showing **Green**. Then, you switch toward a siding artery and all 3 Dwarfs change state **Red** to **Green** (8002) and **Green** to **Red** (8001s). 3 CHOICES = Buy 1 - 8001, save \$ over the competition out there! Buy 2 -8001s and save \$2 or buy a set 8010 save \$6. You also have **easy install** plus **Real Dwarfs action !** We Guarantee it !

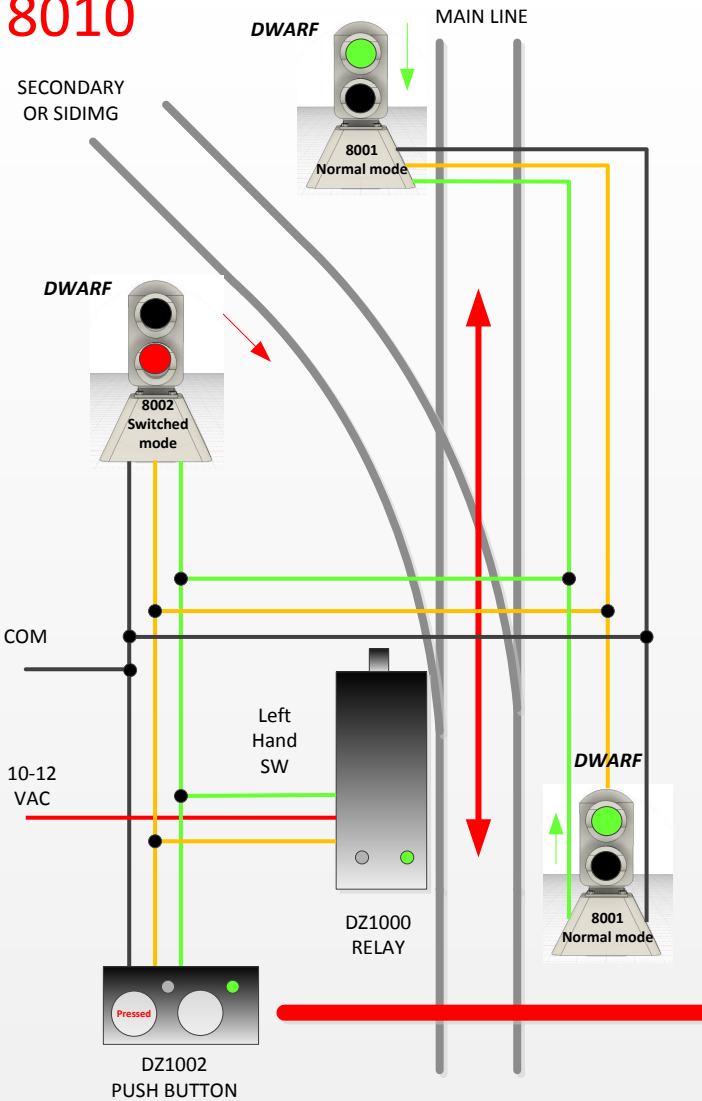

DWARFS FOR - ROSS & GARGRAVES **DZ-1000 ONLY**

K & R CUSTOM MODELS

8010 INCLUDES 3 DWARFS: 2-8001 AND 1-8002
