

Dwarf Signals (**8005** and **8006**) tell it all...individually placed, you can be sure that the switch was thrown as seen clear across your whole layout. Or, you are an Engineer and you want the status of a clear switch or not switched track, no matter what track or direction you are running. You would want the **8012 set** of 3 Dwarfs, **2-8005s** and **1-8006** for the side track. See below, the LEFT Switch application *example* using the **DZ-2500 Switch** and **DZ-2502 push button control switch**. State 1 shows the switch running on a main line (*example only*). The curved siding is **Red** (8006) and the straight main line with **2-8005s** showing **Green**. Then, you switch toward a siding artery and all 3 Dwarfs change state **Red to Green** (8006) and **Green to Red** (8005s). **3 CHOICES = Buy 1 - 8005, save \$ over the competition out there! Buy 2 -8005s and save \$2 or buy a set 8012 save \$6. You also have easy install plus Real Dwarfs action ! We Guarantee it !**

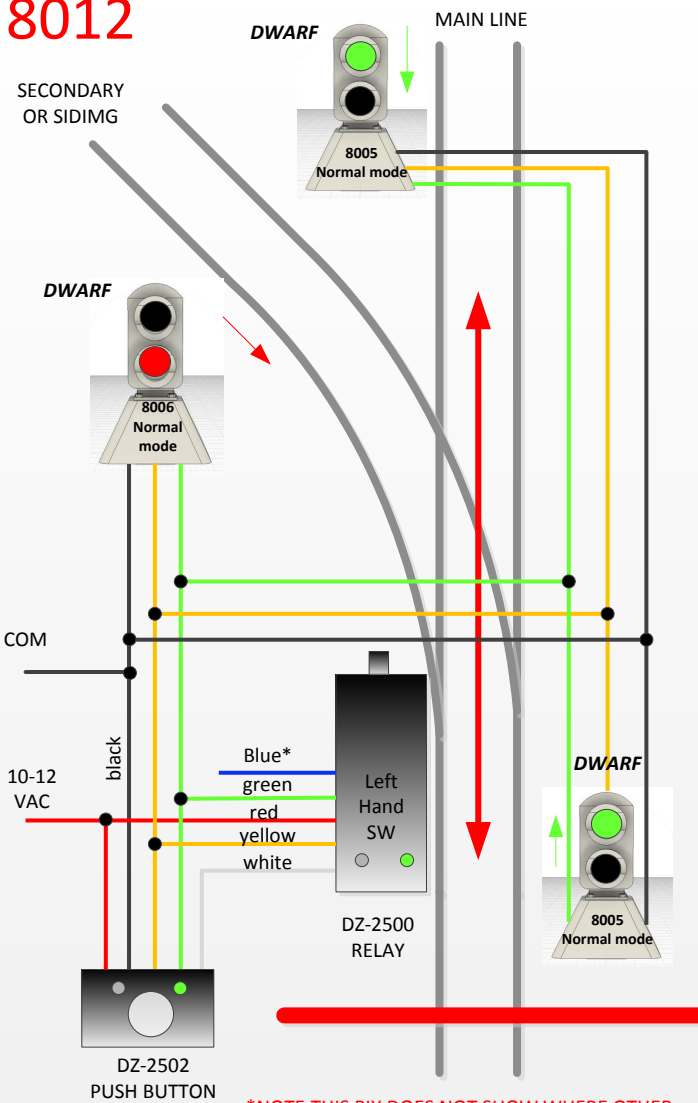

DWARFS FOR - ROSS & GARGRAVES **DZ-2500 ONLY**

**K & R CUSTOM MODELS**

**8012 INCLUDES 3 DWARFS: 2-8005 AND 1-8006**

**8012**

\*NOTE: THIS PIX DOES NOT SHOW WHERE OTHER CONNECTIONS FOR BLUE, GREEN AND YELLOW.
