

Dwarf Signals (**8009A & 8009B**) tells it all, if placed as shown below. You can be sure that the switch was thrown as seen across your whole layout. You are an Engineer and you want the status of a clear switch or switched track, no matter where you are. You would want an **8014 set of 3 Dwarfs**, which includes **2-8009A & 1-8009B**. See below, a Left Switch *example* using the **MTH REMOTE SWITCH CONTROL with 8014 Dwarf Set**. **STATE 1:** Shows the switch strait on your main line. The curved siding is **Red (8009B)** & the straight main line **2-8009A** showing **Green**. **STATE 2:** You switch toward a siding artery & all 3 Dwarfs change state, **Red to Green (8009B)** and **Green to Red** on both (**8009As**). Save \$ over the competition out there by **Buying a set 8014 & save \$6 OR MORE**. You also have **easy instalation with 3 color coded WIRES** that match most MTH Switches, plus, get **Real Dwarfs action ! We Guarantee it !**

DWARFS FOR – MTH SWITCHES ONLY

K & R CUSTOM MODELS
