INTRODUCTION

This USB ⇔ TTL 3.3V converter is a port-powered bi-directional USB to TTL/CMOS 3.3V converter, which can be used to convert any standard full-duplex USB port into a full-duplex TTL 3.3V port and vice versa. The unit is powered from the USB port and it supports data auto-sensing & self-adjusting, and therefore, no baud rate setting is required. The unit uses the latest FTDI chipset and is fully compatible with Windows 10/8/7/Vista/XP/Server2008 /2003/2000/98 (32-bit), Windows 10/8/7/Vista/XP/Server2008/2003 (64-bit), Win CE, Mac, and Linux. Note: the latest drivers (chipset FT232B) are available at http://www.ftdichip.com/drivers/vcp.htm.

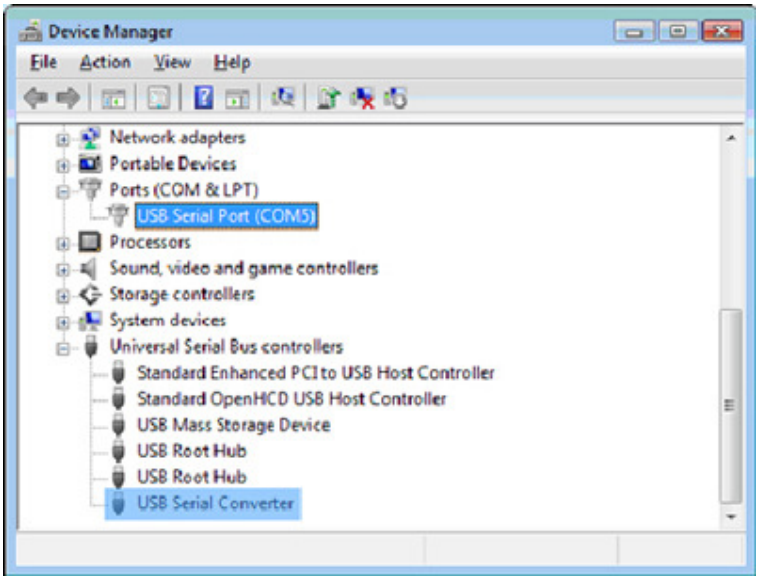
■ TROUBLESHOOTING

- Make sure that the USB-TTL3.3V converter is connected to your USB port, and the driver is installed correctly (as shown below); otherwise, please reinstall the driver (refer to https://www.commfront.com/pages/usb-driver-installation-guide for details).



- Perform a loopback test by using CommFront's 232Analyzer software: Connect a USB-TTL3.3V converter to your USB port, short pin TX (TTL Out) to RX (TTL In) on the termination board, and then send commands from the 232Analyzer software. You should receive an echo of the commands sent. By performing a simple loopback test like this, you can test both the transmitter and receiver of the USB-TTL3.3V converter. This is very helpful when you are in doubt about the performance of your converter.
