## Plywood Chandelier

2011

### FINISHES

Structure Finish - Wood

origami wood  
in walnut

### Lighting

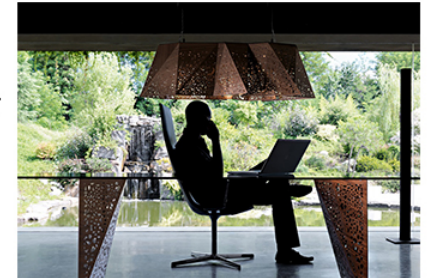

The ceiling lamp has two separate electrical circuits that power two light bulbs to be mounted in the top half and six warm light LEDs installed in the bottom half. The light bulbs emit light downwards while the LEDs emit light at the sides through the laser-cut holes in the lampshade to create an effect of light and shadow on the ceiling and walls.

**Light bulbs not included. We recommend the use of two compact fluorescent light bulbs 30W MAX or LED bulbs with E27 connector.**

### MATERIALS

- Wood
- Metal
- LED

Creativity and technological innovation come together in this luminous sculpture built with a two-millimeter-thick wooden material, laser engraved and bent like an origami thanks to a complex technological process patented by Horm.

Structure made from lacquered particleboard or MDF. Sides and doors made from a material designed and patented by Horm, composed of a sandwich of walnut veneer and fabric 2.2 mm thick.
