MATERIALS

- Fabric

Ergonomic chair for relaxation and waiting areas. Convenient, comfortable and innovative in its timelessness. The wooden base supports the ergonomic structure and has a strong Scandinavian appearance. Essential and timely design: the body is thickly padded.

A tubular metal structure made up of two separate elements compressing a foam block divided into three elements. The three foam elements and the upper part of the metal structure are covered with a boucle fabric available in 5 shades. Self-levelling feet.
