

ITAIR

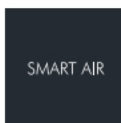

Natural air purifier.

During the 1980s, NASA discovered that some plants eliminate harmful particles, not just from their leaves, but from the roots as well. Today, the LINV researches, along with the University of Florence, have developed an air purification system which, thanks to a controllable technological heart, converts polluting agents into nourishment for plants, which then project purified air into the surrounding environment through their roots. A plant equipped with this system, multiplies its performance up to one hundred times. ITair can be installed in many Miniforms sideboards, influencing one's well-being and creativity. Check product pages for pricing and availability.

-  Gestisci ITAIR dal tuo smartphone.
Control ITAIR from your smartphone.
-  Analizzi inquinamento, temperatura e umidità dell'ambiente.
Real-time pollution, temperature and humidity analysis.
-  Respiri meglio riducendo allergie, asma, problemi polmonari e mal di testa.
Breathe better and reduce allergies, asthma, lung problems and headaches.
