#### ITAIR AIR PURIFIER

During the 1980s, NASA discovered that some plants eliminate harmful air particles, not just from their leaves, but from their roots as well. Today, the LUNV researchers, along with the University of Florence, have developed an air purification system which, thanks to a controllable technological heart, converts polluting agents into nourishment for plants, which then project purified air into the surrounding environment through their roots. A plant equipped with this system multiplies its performance up to a hundred times. ITAIR can be installed in all our cupboards, actively influencing bedroom's well-being and productivity.

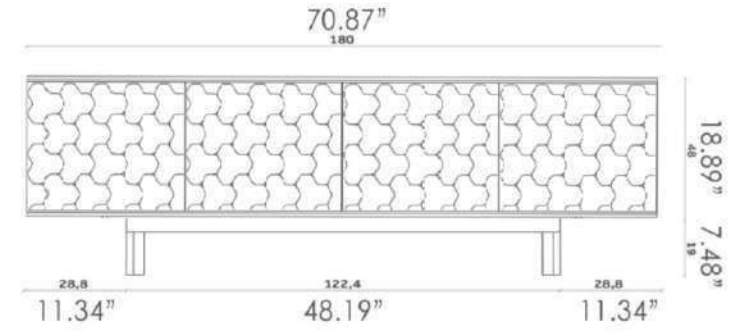

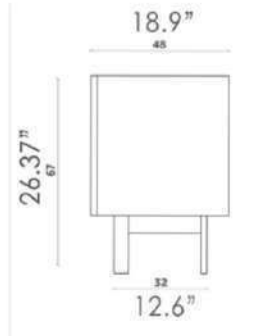

#### SOKO Cabinet Design Miniforms Lab BF 55

1 central wooden shelf lacquered in 9 colors

#### SOKO Cabinet Design Miniforms Lab BF 57

1 glass shelf on the left

#### SOKO Cabinet Design Miniforms Lab BF 56

1 inner central glass shelf
