

Trussforte have developed tooling to manufacture all our Edge Trim products in house (in Australia), and currently offer popular Edge Trim section sizes that can be used with our Expanded mesh products (or any other products that require a simple cost effective edge trim).

Trussforte Edge Trims can be supplied in standard 2.4 lengths as well as optional 3.0 lengths, in a range of sizes to suit convenient framing/edging of your expanded mesh panels.

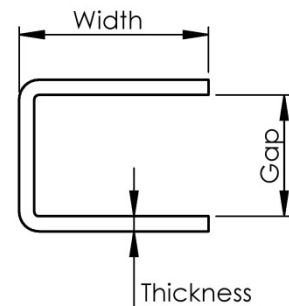

Edge Trims can be easily attached to expanded mesh panels by many conventional fastening methods such as pop riveting, self-drilling screws, or carefully applied spot welding.

Edge Trims can be supplied in a black mild steel finish or a metal coated Galvabond finish as provided using raw material supplied by the steel mills. We can also supply Edge Trims manufactured from Grade 5005 Aluminium.

Trussforte can also look at manufacturing special material Edge Trims from Brass or Copper as well as some sizes from Stainless Steel. Please contact our friendly staff for all enquiries.

Available Product Range

Product Code	Standard Length (mm)	Finish	Width (mm)	Gap (mm)	Thickness (mm)	Weight (kg/m)
LET6-2400	2400	Uncoated Mild Steel	15	6	1.2	0.33

	RH3030				

Notes:

- Edge trim and expanded metal mesh products may not necessarily combine to give a tight fit.
- Non Standard products that are not listed above may still be used with a suitable Edge Trim if desired - please contact our office to determine Edge Trim suitability for your mesh or product.
