Drop Impact Resistance Performance and Environmental Resistance Performance

Drop impact	Vertical drop test (5 sides excluding the top side) is conducted from a height of 76 cm and the normal operation is confirmed.
Impact protection	The normal operation is confirmed after dropping a 500 grams weight of IK 07 grade from height of 40 cm onto the equipment.
Dust proof	The normal operation is confirmed after putting the equipment in a device containing dust of 25 μm or less for 8hours.
Drip proof	The normal operation is confirmed after exposing water droplet of IPX 2 grade with 3mm/min to 4 sides for 2.5 min or more tilted by 15 degrees.

*1 Corresponding to optical fiber in compliance with ITU-T recommendation.

*2 This numerical number is the one when measured for the purpose to show the fusion splice characteristics in the testing method of IEC 61073-1, it is not the one to guarantee the splicing loss.

*3 Number of times that the fusion splicing of the fiber and the heat reinforcement can be performed continuously at a rate of once a 90seconds at the room temperature (20°C) condition when using a new 100% charged battery. The number of times you can use depends on the state of the battery and usage.

*4 The number of times will vary depending on the state of the electrode rod and the operating environment.
