Removal Efficiency

Beta Ratio Efficiency	Beta 100 99%	Beta 20 95%
0.1 micron	0.8	0.1
0.2 micron	1.0	0.2
0.4 micron	2.0	0.4
0.6 micron	3.0	0.6
1 micron	6.0	1.0
3 micron	14	3.0
5 microns	17	5.0
10 microns	25	10.0

$$\text{Beta Ratio} = \frac{\text{Upstream particle counts}}{\text{Downstream particle counts}}$$

The micron ratings shown at various efficiency and beta ratio value levels were determined through laboratory testing, and can be used as a guide for selecting cartridges and estimating their performance. Under actual field conditions, results may vary somewhat from the values shown due to the variability of filtration parameters.

Testing was conducted using the single-pass test method, water at 3 gpm/10" cartridge. Contaminant's included latex beads, coarse and fine test dust. Removal efficiencies were determined using dual laser source particle counters.
