INSTRUCTIONS:

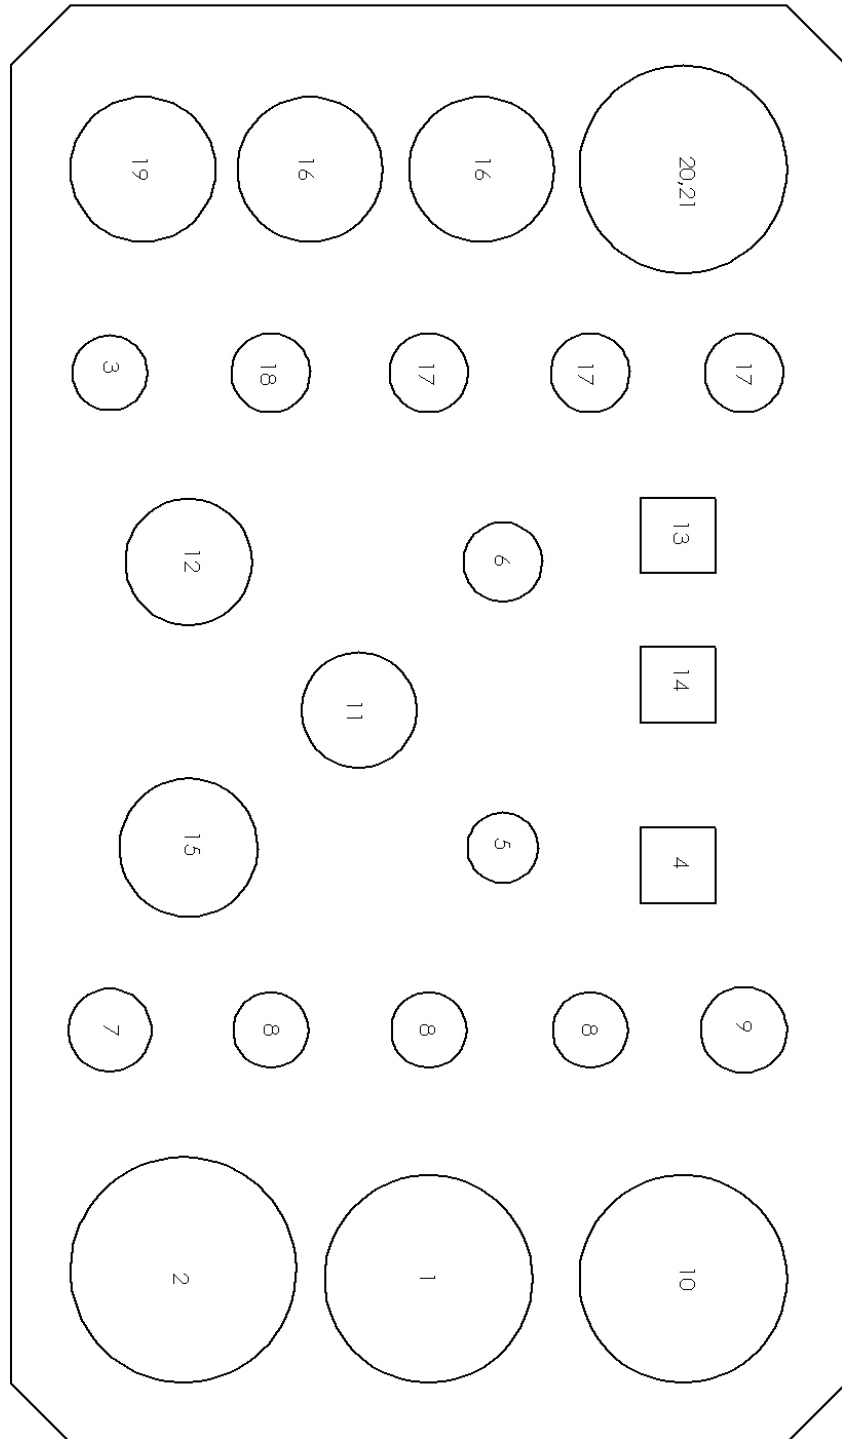

BAKER™ Transmission Rebuild Kits are designed to completely service your BAKER or Factory H-D™ transmission back to its original freshness from the factory. The kit can be installed by any competent mechanic or dealership technician. When installing any of the Transmission Rebuild Kits, it is required that you have your H-D™ factory service for your motorcycle available. We have included the BAKER DD6, OD6, and DD5 builder's kit instructions for additional information on reinstallation of the gearset cassette.

Use your factory service manual to uninstall your gearset. Remove your gearset with trap door assembly from the transmission case. You will now need to completely disassemble the bearing door, mainshaft and countershaft assemblies. Thoroughly clean and inspect all the parts. Be sure to use assembly oil when installing the bearings on to the shafts. It is also important to never re-use any of the snap rings. After you have thoroughly cleaned the mainshaft and countershaft threads, apply red loctite to the threads then torque the two $\frac{3}{4}$ -16 nuts (pn 7340BD) to 55-60ft/lbs.

Once the gearset is completely rebuilt, re-install the gearset using your BAKER Builder's Kit instructions or your Factory service manual. All BAKER service and installation instructions can be downloaded at www.bakerdrivetrain.com. Tech support is also available toll free at 1-877-640-2004.
