TRIGGER SENSITIVITY ADJUSTMENT

The trigger travel sensitivity of your Scott™ release is located at the base of the trigger near the index finger purchase area [Fig. 1]. It is set from the factory to provide a light and smooth trigger feel. To achieve the shortest suggested travel, start by holding the bow string in your bow hand and hook your release to your string loop [Fig. 2]. **NEVER DRAW THE BOW BACK WHILE SETTING THE TRAVEL SENSITIVITY.** Pull in opposite directions to test travel sensitivity, pulling approximately 30lbs when testing. Adjust the travel set screw counter clockwise in 1/8th turn increments until the release fires with an approximate 30lbs. pull. Turn the travel screw back in [clockwise] 1/2 of a turn and your release will be at its lightest suggested travel setting. It is possible to adjust the screw out too far [counter clockwise] **causing premature fire.** Use blue Loc-Tite [#242] if the screw is adjusted more than once. Always ensure the release is adjusted to a safe setting prior to drawing a bow. Never draw your bow without an arrow, and never point your bow in an unsafe direction.

[Fig. 1]

LENGTH ADJUSTMENT

SOLID CONNECTOR

To adjust the length of your Scott™ Recon release with a solid connector, first remove the #4-40 socket head cap screw from the side of the release head [Fig. 3]. The release can now be moved to align any of the other holes in the release head with the connector. Select the length you want, reinsert the screw, and tighten. **DO NOT OVER TIGHTEN, AS IT MAY STRIP THE THREADS IN THE RELEASE HEAD.**

[Fig. 2]

RECOMMENDATIONS OF USE

The Talon is designed for string loop use. **DO NOT** use this or any Scott™ release in combination with any metal loop device. Doing so will damage your Scott™ release.

RECOMMENDED MAINTENANCE

Your Scott™ release should be blown out with dry air after any use in damp environments. Once dry, it should be lightly lubricated with a light machine oil.
