

THIN FLEX™

Not Made With Natural Rubber Latex

Multi-Directional Tear - Elastic Adhesive Tape

THIN-FLEX is a premium Latex-Free adhesive stretch tape offering Veterinary Practitioners and Technicians a thinner lightweight stretch fabric with unique conformance and adhesion properties used for catheter placement and other critical companion animal wound care bandaging applications.

Our THIN-FLEX stretch fabric compensates for the naturally occurring rehydration process by conforming to the animals skin and helping minimize “big paw” syndrome while keeping the catheter intact. THIN-FLEX tape is available in three clinic ready sizes ½”, 1” & 2” widths and offers quick easy multi-directional tear for creating thin strips in time sensitive applications while providing superior conformity over standard non-stretch rigid adhesive tapes.

Known for being one of the smoothest low profile stretch-tapes available our THIN-FLEX adhesive technology has been industry tested for over 35 years across the Sports Medicine industry and is becoming sought out by Veterinarians everywhere for companion animal wound care bandaging and catheter securing applications.

“We have your ½ Inch Catheter Tape”

Key Features
