

Novormon™ 5000

5000 I.U. Pregnant Mares' Serum
Gonadotropin (PMSG) for injection,
Mfr. std. Sterile.

DO YOU NEED TO SYNCHRONIZE HEATS?

Indication

Novormon™ helps stimulate follicle development in functional ovaries of cows, ewes and sows. Pregnant mares' serum gonadotropin (PMSG) is predominantly follicle-stimulating; its effects closely resemble those of the follicle-stimulating hormone (FSH) of the anterior pituitary.

Description

Novormon™ 5000 is pregnant mares' serum gonadotropin (PMSG), lyophilized to maintain its potency. Each 25 mL vial contains 5000 I.U. of PMSG. When reconstituted according to label directions, the final solution contains 200 I.U./mL of PMSG. Novormon™ 5000 diluent is a 25 mL vial of water for injection USP.

Active Ingredient

PMSG 5000 I.U.

The diluent volume of 25 mL yielding a final concentration of 200 I.U./mL.

Dosage & Administration

Administer one (1) injection subcutaneously, intramuscularly or intravenously.

Cows 1,000 to 1,250 I.U.

Sows 750 to 1,250 I.U.

Ewes 300 to 1,000 I.U.

Directions for Reconstitution: Use a sterile syringe. Do not use chemical or cold sterilization for syringe. Add 25 mL of the supplied water for injection USP to the vial containing the dry powder to obtain a clear solution containing 200 I.U./mL of PMSG.

Warning

Treated animals must not be slaughtered for use in food for at least seven (7) days after the latest treatment with this drug.

Storage

Store in the dark at 2°C to 8°C (36°F to 46°F). Once reconstituted, the solution should be used immediately or within a few hours. Do not retain the unused portion of the vial.

Presentation

One 25 mL vial with one 25 mL vial of diluent.

10/case
