3M Critical & Chronic Care Solutions Division Product Catalog

3M Critical & Chronic Care Solutions

Reducing complexity, reinventing delivery, so you can focus on what's important.

Health care is evolving rapidly. Changing reimbursements. More stringent patient requirements. New care delivery models. 3M understands your challenges and strives to make your job easier with reliable, quality products and solutions. Supported by comprehensive training, professional development, and clinical, technical, and customer support, our products can help you see more patients at lower costs, while continuing to improve overall health.

That's health care progress made possible.

Help your teams improve patient outcomes across the continuum of care, from the hospital to the clinic, long-term facility to home, with medical supplies and clinical expertise you can rely on.

Clinical specialists providing:

- Professional (CE credited) continuing education programs. **3M.com/medicaleducation**
- Protocol and formulary development to promote clinical outcomes, standardization, and utilization within your departments.
- Solutions-based website for easy access to information on a wide range of skin and wound clinical conditions. **3M.com/C3SD**
- Toll-free helpline that offers experts to assist customers with technical and product information. **1-800-228-3957**

Experienced sales team, including specially trained representatives who provide in-service training, continuing education and conversion programs.

Customer service representatives who are available to handle your order entry calls and special shipment requests to ensure customer satisfaction.

Compression

Compression

3M™ Coban™ 2 and 3M™ Coban™ 2 Lite Two-Layer Compression Systems

Engineered with Intelligent Compression Dynamics to stay in place and deliver comfortable, effective, therapeutic compression for venous leg ulcers and other conditions requiring compression.

- Comfortable – Provides sustained therapeutic compression for up to 7 days
- Stays in place – Clinically proven to significantly reduce slippage, to encourage longer wear
- Provides consistent compression – The compression layer is designed to be applied at full stretch, reducing application variability
- Enables a more normal lifestyle – The thin, lightweight, breathable sleeve allows patients to wear their own shoes, so they can return to their regular daily activities
- Easy to use – Application is fast, and easy to teach and learn
- Not made with natural rubber latex

Suggested applications:

- For management of venous leg ulcers, edema, lymphedema and other clinical conditions where compression is appropriate
- Coban 2 Compression System (Cat #2094N) may be used for patients with an ABPI greater than or equal to 0.8
- Coban 2 Lite Compression System (Cat #2794N) may be used for patients with ABPI greater than or equal to 0.5

		2 in × 3 yd (5 cm × 2,7 m) stretched			

Dressings

Dressings – Alginate

3M™ Tegaderm™ High Integrity and High Gelling Alginate Dressing

Both High Integrity and High Gelling styles maintain a moist wound healing environment.

- Gel forming for optimal moist wound healing environment
- Absorbent — use on moderate to heavily exudating wounds
- Highly conformable primary wound dressing
- Compatible with 3M cover dressings

Suggested applications:

- Pressure, venous and neuropathic (diabetic) ulcers
- Superficial wounds, cuts and abrasions
- Donor sites
- Post-operative wounds
- Trauma wounds
- Other dermal lesions

Dressings – Composite

3M™ Tegaderm™ Absorbent Clear Acrylic Dressing

A unique transparent wound dressing with fluid handling capacity.

- Transparent dressing allows for wound monitoring without changing the dressing
- Clear design takes the guesswork out of application over the wound
- Novel acrylic polymer pad technology designed to handle low to moderate wound drainage
- No dressing breakdown in the wound
- Low friction surface minimizes potential for friction and shear
- Allows for gentle removal from skin
- Barrier to external contaminants, body fluids, bacteria and viruses*

Suggested applications:

- Partial- and full-thickness dermal ulcers
- Skin tears
- Pressure ulcers
- Superficial wounds and abrasions
- Superficial partial-thickness burns
- Donor sites
- Clean, closed approximated surgical incisions or laparoscopic incisions

**In vitro* testing shows that the transparent film provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Dressings – Island

3M™ Medipore™ +Pad Soft Cloth Adhesive Wound Dressing

A gentle, conformable, absorbent dressing.

- Highly conformable dressing is easy to apply, conforms to body contours, and flexes with movement or swelling
- Dressing is porous and breathable for increased patient comfort, better exchange of moisture vapor and oxygen, and reduced risk of skin maceration
- Unique, non-adherent pad won't stick to the wound, allowing normal wound healing processes to occur with less pain and trauma
- Dressing provides excellent adhesion, yet is gentle to the skin
- Convenient, all-in-one dressing reduces application time
- Absorbent pad protects wound and absorbs drainage
- Full range of sizes is available to fit every application pad

Suggested applications:

- Post-surgical dressings — especially on areas where swelling or movement is expected
- Superficial and partial-thickness wounds
- Lacerations, abrasions and burns
- IV catheter sites
- Light to moderately draining wounds

Dressings – Island

3M™ Tegaderm™ +Pad Film Dressing with Non-Adherent Pad

A waterproof, absorbent dressing.

- Convenient, all-in-one sterile dressing reduces application time
- Waterproof barrier which allows patients to bathe or shower without removing dressing
- Unique, non-adherent pad won't stick to the wound, allowing normal wound healing processes to occur with less pain and trauma
- Breathable film allows skin to function normally with good exchange of moisture vapor and oxygen
- Conformable dressing is easy to apply, and stretches with the skin to promote longer wear time

Suggested applications:

- Post-surgical dressings — especially on areas where swelling or movement is expected
- Superficial and partial-thickness wounds
- Lacerations, abrasions and burns
- IV catheter sites
- Light to moderately draining wounds

**In vitro* testing shows that the transparent film provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Dressings – Contact Layer

3M™ Tegaderm™ Non-Adherent Contact Layer

Protects the wound bed while reducing pain of dressing changes. A woven, nylon fabric with sealed edges that is non-adherent, non-irritating and hypoallergenic. The wound contact material is placed over the wound and under gauze or other absorbent dressing.

- Minimizes disruption of granulating tissue
- Lessens patient pain during dressing changes and removal
- Maintains an optimal moist wound environment for healing
- Indicated for both partial and full-thickness ulcers
- Easily cut to size

Suggested applications:

- Partial- and full-thickness wounds
- Clean closed surgical incisions
- Superficial and partial-thickness burns
- Donor sites
- Graft fixation sites
- Skin tears
- Traumatic and chronic wounds
- Dermatologic lesions

**In vitro* testing shows that the transparent film provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Dressings – Foam

3M™ Tegaderm™ High Performance Foam Non-Adhesive Dressing

A non-adhesive foam dressing that effectively handles low to high exuding wounds. Innovative layer technology absorbs and evaporates moisture to maintain an optimal wound healing environment.

- Unique multi-layer design provides high absorbency with high breathability to reduce the risk of maceration
- Adapts to changing levels of exudate to maintain moisture balance for optimal wound healing
- Demonstrates high fluid handling capacity under compression
- Dressing does not stick to wound bed thereby minimizing disruption of healing tissue
- Film backing prevents strike-through and protects against external bacteria and viruses*

Suggested applications:

- Pressure, arterial, neuropathic (diabetic) and venous leg ulcers, including use under compression wraps
- Skin tears and abrasions
- Donor sites
- Superficial and partial-thickness burns

Dressings – Foam

3M™ Tegaderm™ High Performance Foam Adhesive Dressing

Helps meet the challenges for low- to high-exuding wounds.

- Innovative layer technology absorbs and evaporates moisture to maintain an optimal wound healing environment
- Unique multi-layer design provides high absorbency with high breathability to reduce the risk of maceration
- Adapts to changing levels of exudate to maintain moisture balance for optimal wound healing
- Film backing prevents strike-through and protects against external bacteria and viruses*
- The mini-wrap provides easy application for difficult body contours such as fingers and toes

Suggested applications:

- Pressure, arterial, neuropathic (diabetic) and venous leg ulcers
- Difficult body contours: heel, elbow
- Skin tears and abrasions
- Superficial and partial-thickness burns

**In vitro* testing shows that the transparent film provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

**The mini wrap dressing is constructed of a conformable, absorbent, polyurethane foam pad with a highly breathable, non-waterproof, film backing reinforced with soft cloth tape.

Dressings – Foam

3M™ Tegaderm™ Silicone Foam Dressing

Ideal for wound management and as part of a comprehensive pressure ulcer/injury prevention program.

- Significantly longer wear time than the leading competitive silicone foam dressing* while being gentle to the skin
- Highly conformable and features a thin, low-profile edge
- Unique multi-layer design that absorbs and evaporates moisture
- Patented spoke delivery system enables easy application
- Stays in place yet removes gently making it ideal for fragile skin
- Film backing that adapts to varying levels of moisture
- Significant absorption capacity
- Lift, assess and re-adhere without losing adhesion

Suggested applications:

- Wound management
- Pressure ulcer/injury prevention
- Venous leg ulcer
- Tube/device cushioning or under compression
- Suitable for use on fragile skin
- Superficial and partial-thickness burns
- Skin tears
- Donor sites

*4x4 and 6x6 dressings, based on *in vivo* studies EM-13977 and EM-13978.

Dressings – Hydrocolloid

3M™ Tegaderm™ Hydrocolloid Dressing

Maintains an optimal moist wound environment which has been shown to enhance healing.

- For low to moderate draining wounds — significantly higher absorbency than leading hydrocolloid at 48 hours
- Proven up to 7 day wear time
- Smooth outer surface helps reduce the risk of shear and friction
- Breathable outer film layer provides consistently high rate of moisture vapor transmission
- Water-resistant film border adheres firmly
- Film border on oval and sacral dressings eliminates the need for tape and makes dressing application easier
- Outer film barrier protects wound and surrounding skin from contaminants, body fluids, bacteria and viruses*

Suggested applications:

- Partial- and full-thickness dermal ulcers
- Superficial wounds and abrasions
- Superficial and partial-thickness burns
- Donor sites

**Dimensions of entire dressing, including hydrocolloid and film backing.

Dressings – Hydrocolloid

3M™ Tegaderm™ Hydrocolloid Thin Dressing

Thin, absorbent and highly conformable.

- May be used as a protective dressing on at-risk skin — may be used on intact skin to protect from friction
- Film border on oval sizes seals to prevent premature dressing failure due to edge lift
- Protects the wound and periwound skin from contaminants, body fluids, bacteria and viruses*

Suggested applications:

- Partial-thickness dermal ulcers
- Superficial wounds and abrasions
- Donor sites

**Dimensions of entire dressing, including hydrocolloid and film backing.

Dressings – Hydrocolloid

3M™ Tegaderm™ Hydrocolloid Dressing Sacral Design

Shape designed specifically for sacral area to allow long wear time.

- Allows convenient placement in the sacral-coccyx area with one-handed application
- Special film bordered “notch” area is designed to allow application in close proximity to the anal opening while still providing a barrier to contamination by feces
- For low to moderate draining wounds — Significantly higher absorbency than leading hydrocolloid at 48 hours
- Provides “non-tenting” border application into the gluteal cleft area to seal against incontinence
- Proven up to 7 day wear time
- Film border seals to help prevent premature dressing failure
- Outer film barrier protects wound and surrounding skin from contaminants, body fluids, bacteria and viruses*

Suggested applications:

- Partial- and full-thickness dermal ulcers
- Superficial wounds and abrasions
- Superficial and partial-thickness burns
- Donor sites

**Dimensions of entire dressing, including hydrocolloid and film backing.

Dressings – Hydrogel

3M™ Tegaderm™ Hydrogel Wound Filler

Amorphous hydrogel, formulated to help provide a moist wound healing environment that has been shown to enhance wound healing. Available in single-dose tubes.

- Preservative-free
- Easy to apply
- Convenient 15 gram and 25 gram sizes

Suggested applications:

- Dry to minimally draining dermal ulcers: pressure, arterial, venous and neuropathic (diabetic) ulcers
- Wounds exhibiting dry eschar and fibrinous slough
- Post-operative surgical wounds
- Abrasions and lacerations

Dressings – Silver

3M™ Tegaderm™ Ag Mesh Dressing with Silver*

Fast-acting, long-lasting antimicrobial barrier in an affordable dressing.

- Easy to use, can be cut, folded or fluffed
- Effective up to seven days
- Effective against a wide range of microbes, including yeast, fungi** and antibiotic-resistant bacteria (MRSA and VRE)
- Versatile, may be used as primary dressing or with absorbent wound fillers
- Can be moistened with wound exudate, sterile normal saline, sterile water or liquid hydrogel

Suggested applications:

- Pressure, arterial, neuropathic (diabetic) and venous leg ulcers
- Surgical wounds
- Trauma wounds
- Superficial and partial thickness burns
- Abrasions
- Donor sites

Dressings – Silver

3M™ Tegaderm™ Alginate Ag Silver Dressing*

Provides the antimicrobial silver, soft-gelling absorbency and fiber strength that professionals need to manage critically colonized wounds and wounds at increased risk of infection.

- Antimicrobial effectiveness — reduces a broad spectrum of pathogens, including MRSA and VRE
- Soft-gelling absorbency — conforms to the wound and is soft and pliable
- Ensures a moist environment for optimal wound healing
- One-piece removal

Suggested applications:

- Pressure, arterial (diabetic) and venous leg ulcers
- Post-operative wounds
- Trauma wounds (dermal lesions, trauma injuries or incisions)
- Graft and donor sites
- Superficial and partial-thickness burns

Dressings – Superabsorber

3M™ Tegaderm™ Superabsorber Dressing

Absorbs and contains exudate.

Superabsorber dressing locks in exudate to help prevent moisture associated complications — even under compression. Can be used both as a primary and secondary dressing.

- Versatile for a variety of wounds with moderate to high exudate levels
- Helps prevent maceration of the wound edges
- Reduces frequency of dressing changes
- Provides patient comfort

Suggested applications:

- Primary or secondary dressing for management of moderate to high exuding partial- and full-thickness wounds
- Pressure ulcers
- Venous leg ulcers
- Neuropathic (diabetic foot) ulcers
- Dehisced surgical wounds

Dressings – HP Film Adhesive

3M™ Tegaderm™ HP Transparent Film Dressing

Tegaderm™ HP dressings are transparent I.V. dressings which are more adherent in moist conditions than standard transparent dressings.

- Transparent dressings allow easy monitoring of wounds without the need to remove the dressing
- Picture-frame delivery makes placement accurate and easy, minimizing potential to stick to gloves or to itself
- Conformable: dressing flexes with skin for greater patient comfort
- Provides a waterproof, sterile barrier to external contaminants including liquids, bacteria and viruses*

Suggested applications:

- Catheter sites
- To protect reddened/at-risk skin
- Stage I and Stage II pressure ulcers
- Skin tears and minor excisions

Dressings – Film

3M™ Tegaderm™ Transparent Film Dressing

Tegaderm™ Brand transparent dressings can be used to cover and protect catheter sites and wounds, to maintain a moist environment for wound healing, and to secure devices to the skin.

- Provides a waterproof, sterile barrier to external contaminants including liquids, bacteria and viruses*
- Made with a hypoallergenic, latex-free adhesive that is gentle to the skin yet holds catheters and other devices in place
- Conformable: dressing flexes with skin for greater patient comfort
- Unique shapes and designs for both I.V. and wound needs

Suggested applications:

- Catheter sites
- Acute and chronic wounds
- Skin protection
- Feeding tubes

Dressings – Film Roll

3M™ Tegaderm™ Transparent Film Roll

This non-sterile roll version of 3M™ Tegaderm™ Transparent Film Dressing provides all the benefits of surgical tape while providing a waterproof, bacterial and viral barrier.

- Provides a waterproof barrier to external contaminants including liquids, bacteria and viruses*
- Can be cut and customized to desired length
- Can be used for fixation of medical devices or infusion tubing
- Conformable — fits body contours, permits free movement without stress on the skin

Suggested applications:

- Fixation of medical devices (e.g. drainage tubes, etc.)
- Waterproof fixation of primary dressings such as gauzes, alginates, foams, etc.
- Protection of at-risk skin from friction and body fluids

Dressings – Bordered

3M™ Tegaderm™ Transparent Film Dressings with Border

Secure. Protect. Stabilize.

- Stabilizes the catheter, minimizing catheter movement
- Provides a waterproof, sterile barrier to external contaminants including liquids, bacteria and viruses*
- Transparency allows monitoring of I.V. sites without the need to remove the dressing
- 7 days wear time
- Picture-frame delivery makes placement accurate and easy, minimizing potential to stick to gloves or to itself

Suggested applications:

- Peripheral and midline venous catheters
- Central venous catheters (including subclavian, jugular, femoral and PICCs)
- Tunneled central vascular devices (ports)
- Dialysis catheters
- Hickman/Broviac catheters
- Pulmonary artery catheters
- Arterial catheters
- Epidural catheters
- Enteral feeding tubes

Dressings – Antimicrobial I.V.

3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Port Dressing

Antimicrobial dressing designed for oncology and hematology patients and others with implanted venous ports.

- CHG gel pad provides immediate and continuous antimicrobial protection
- CHG gel pad conforms around the needle; stays in place and in contact with skin
- Adhesive-free window minimizes adhesive contact with needle and patient's skin, reducing the risk of the dressing sticking to needle during removal
- Flexes with patient movement and can be worn up to 7 days
- Transparent dressing and CHG gel pad permit clear visibility around the insertion site area

Suggested applications:

- Designed for use with implanted venous ports and non-coring Huber needles

Dressings – Antimicrobial I.V.

3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Securement Dressing

The only transparent dressing cleared and proven to reduce catheter-related bloodstream infections (CRBSI) and vascular catheter colonization that aligns with evidence-based guidelines and practice standards.

The dressing provides four essential elements you need to protect I.V. sites in one integrated, easy-to-use product.

- Infection Reduction: Clinically proven to reduce CRBSI by 60% in patients with central and arterial lines
- Site Visibility: Transparent dressing and gel pad enable early identification of complications at the insertion site
- Consistent Application: The integrated CHG gel pad and dressing design ensure standardized, correct application every time
- Catheter Securement: Designed to minimize catheter movement and dislodgement

Suggested applications:

- Short peripheral I.V. and midline venous catheters
- Central venous catheters (including subclavian, jugular, femoral and PICCs)
- Dialysis catheters
- Arterial catheters
- Epidural catheters
- Other percutaneous devices

Securement Systems – PICC/CVC

3M™ PICC/CVC Securement Device + Tegaderm™ I.V. Advanced Securement Dressing

Securement without sacrifice.

- Sutureless securement balances reliable adhesion with gentleness to skin
- Designed to be worn for up to 7 days
- Removes cleanly, without causing patients undue pain or distress
- Skin-friendly materials improve comfort and mobility
- Easy to apply and remove
- Eliminates the risks and costs of suture-related needlestick injuries
- Can be repositioned upon initial application without losing adhesion

Suggested applications:

- Accommodates the majority of PICC and CVC catheters up to and including 12 French

Dressings – I.V. Advanced Securement

3M™ Tegaderm™ I.V. Advanced Securement Dressing

Designed for securement and comfort.

Comprehensively designed to deliver exceptional patient care through advanced catheter securement, superior wear time and gentle removal.

- A line of I.V. dressings which optimizes all characteristics to provide advanced I.V. and central line catheter securement
- A cost-effective I.V. and central line catheter securement solution
Innovative adhesives balance securement and gentle removal
- Easy to apply and remove
- Provides up to 7 days of wear time for CVCs

Suggested applications:

- Adult and pediatric venous catheters
- Short peripheral and midline venous catheters
- Central venous catheters (including subclavian, jugular, femoral and PICCs)
- Port-a-caths or mediports
- Dialysis catheters
- Hickman/Broviac catheters

Dressings – Highly Breathable

3M™ Tegaderm™ Diamond Pattern Film Dressing

A transparent dressing for protecting I.V. and wound sites and securing catheters to moist skin. It balances increased breathability with effective adhesion so it stays in place even in moist conditions.

- Promotes moisture evaporation and improved securement while providing continuous site observation
- Provides a waterproof, sterile barrier to external contaminants including liquids, bacteria and viruses*
- Picture-frame delivery makes placement accurate and easy, minimizing potential to stick to gloves or to itself

Suggested applications:

- To cover and protect central venous catheter sites including subclavian, jugular, femoral and PICC
- To cover and protect short peripheral I.V. and midline venous catheters

Medical Tapes

Medical Tapes – Extra Gentle

General Securement

3M™ Kind Removal Silicone Tape

3M Kind Removal Silicone Tape provides reliable securement, kind removal, and gentle wear without compromise.

- **Security:** Offers reliable and constant fixation, remains in place until you decide otherwise
- **Comfort:** Removes cleanly, without disrupting fragile skin layers or causing patients undue pain
- **Ease of use:** Can be repositioned and neatly torn by hand
- **Economical:** Offered in single patient roll sizes

Suggested applications:

- Ideal for patients with sensitive, compromised, or at-risk skin
- When repeated taping is necessary
- When skin integrity and minimizing pain are primary concerns

Medical Tapes – Multi-Purpose

General Securement

3M™ Transpore™ White Surgical Tape

Gentle tape with strong adhesion and easy, bi-directional tear for dressing applications.

- Gentle to skin
- Easy, straight bi-directional tear
- Breathable to maintain skin integrity
- Good initial and long-term adhesion (72 hours)
- Easy to handle with gloves
- Hypoallergenic and not made with natural rubber latex
- Water resistant

Suggested applications:

- Securing dressings to damp or dry skin
- Taping fragile, at-risk skin
- When repeated taping is needed
- Anchoring tubing and devices
- When tape width must be customized

Medical Tapes – High Adhesion

Critical Device/Tube Securement

3M™ Durapore™ Surgical Tape

Durable, no-stretch silk-like cloth tape for critical tubing applications.

- High strength, versatile, conformable
- Adheres well to dry skin
- Convenient bidirectional tear
- Hypoallergenic and not made with natural rubber latex
- Water resistant

Suggested applications:

- Securing tubing and devices
- Anchoring bulky dressings
- Immobilizing fingers and toes
- Stabilizing finger splints

Medical Tapes – Multi-Purpose

General Securement

3M™ Transpore™ Surgical Tape

Transparent, perforated plastic tape that tears easily, works reliably.

- Easy, straight, bidirectional tear
- Easy to handle with gloves
- Good adhesion to skin and tubing
- Transparent, porous
- Hypoallergenic and not made with natural rubber latex
- Water resistant
- Allows clinician to tailor the tape for various dressings and devices

Suggested applications:

- Securing tubing and devices (e.g., catheters, IV tubing)
- Anchoring bulky dressings
- When tape width must be customized

Medical Tapes – Multi-Purpose

General Securement

3M™ Micropore™ Surgical Tape

The Original, Breathable Paper Tape

Gentle, breathable, #1 trusted brand for 50 years.

- Gentle adhesion
- Conformable and highly breathable
- Reliably secures dressings and devices to skin
- Hypoallergenic and not made with natural rubber latex

Suggested applications:

- Securing small to medium dressings, especially on damp skin
- Securing lightweight tubing
- Securing ostomy appliances
- Taping fragile, at-risk skin
- When repeated taping is needed

Medical Tapes – Flexible

Flexible Securement

3M™ Medipore™ Soft Cloth Surgical Tape

3M™ Medipore™ Dress-It Pre-Cut Dressing Cover

Breathable soft cloth tape for a broad range of applications.

- Available in pre-cut pads
- Easy to use
- Easy on the skin

Suggested applications:

- Securing dressings and ostomy pouches to fragile skin
- When repeated taping is needed
- Anchoring post-surgical dressings
- Used as retentive sheeting over gauze
- Securing over areas where skin may stretch (e.g., edema, distention, hematoma formation or movement)

Medical Tapes – Flexible

Flexible Securement

3M™ Microfoam™ Surgical Tape

3M™ Microfoam™ Sterile Tape Patch/Patches

Highly conformable elastic foam tape that stretches for compression applications or securing dressings on challenging areas.

- Multi-directional stretch to accommodate swelling and promote comfort
- Conforms readily
- Gentle, secure adhesion to irregularly contoured sites
- Water resistant
- Hypoallergenic and not made with natural rubber latex

Suggested applications:

- Securing dressings on sites where movement is likely such as over joints and other challenging areas
- Securing compression dressings to assist in hemostasis or control edema (e.g., cardiovascular/angio sites, breast biopsies, orthopedic, thoracic and abdominal surgical dressing)
- Provides cushioning as needed

Medical Tapes – High Adhesion

Critical Device/Tube Securement

3M™ Multipore™ Dry Surgical Tape

Specialized tape for high moisture applications.

- Reliable securement in damp areas; suitable for wet or diaphoretic skin
- Bi-directional elastic stretch
- Conformable to body contours and curves
- Grid liner enables precise cutting and customization to any shape or size
- Water resistant
- Hypoallergenic and not made with natural rubber latex

A specialized tape designed for firm and critical securement of medical devices such as catheters, tubing or wound dressings in high moisture applications and damp areas.

Suggested applications:

- Critical securement of tubing
- Critical securement of other medical devices such as catheters or wound dressings

Self-Adherent Wraps

Self-Adherent Wraps

3M™ Coban™ Self-Adherent Wrap

A self-adherent elastic wrap that functions like a tape, but sticks only to itself.

- Sticks to itself without adhesive — needs no pins or clips
- Wrap stays in place — no need for frequent readjustment
- Lightweight, porous and comfortable for patients
- Protect primary dressings
- Available sterile and non-sterile

Suggested applications:

- Secure dressings, IVs or other devices
- Compression to reduce edema
- Reduce post-operative swelling
- Overwrap for splints, support sprains and strains.

Self-Adherent Wraps

3M™ Coban™ LF Latex Free Self-Adherent Wrap with Hand Tear

Latex-free, self-adherent elastic wrap that functions like a tape, but sticks only to itself and allows clinicians to tear by hand.

- Does not contain natural rubber latex in the product or its packaging
- Hand tearable — eliminates the need for scissors or cutting
- Sticks to itself without need for adhesive, pins or clips for fast and easy application
- Wrap stays in place — no need for frequent readjustment
- Lightweight, porous and comfortable for patients
- Protect primary dressings
- Available sterile and non-sterile

Hand-tearable
no scissors needed

Skin Care

Skin Care

3M™ Cavilon™ No-Rinse Skin Cleanser

A no-rinse cleanser that can be used for incontinence and general skin cleansing needs.

- pH balanced formula for effective, gentle cleansing
- Moisturizes, conditions and soothes skin
- Hypoallergenic
- Helps control odor

Suggested applications:

- Incontinence skin care — cleaning urine, stool and body fluids from skin
- May also be used for diabetic foot care

3M™ Cavilon™ 3-in-1 Incontinence Care Lotion				
3383	8 oz. bottle	12	1	A6250

Skin Care

3M™ Cavilon™ No Sting Barrier Film

The original alcohol-free barrier film intended to protect skin from body fluids, adhesives and friction.

It is composed of a unique 3M terpolymer that forms a breathable, transparent protective coating on the skin. The polymer is dissolved in a solvent system that makes the product fast drying and non-sticky. It also contains a plasticizer that assists in forming a continuous film even when applied over an area that bends or creases. It is non-cytotoxic and hypoallergenic allowing use on intact or damaged skin.

- More clinical evidence than any other moisture barrier or barrier film
- The intelligent choice to help prevent medical adhesive-related skin injury (MARS) around infusion sites and wounds
- Clinically proven, cost effective, long lasting protection from incontinence-associated dermatitis (IAD)
- Helps protect skin around wounds and ostomies from moisture and body fluids
- Will not clog or reduce absorbency of diapers or pads
- New peel down package for 1 mL wand is designed to facilitate aseptic technique
- CHG compatible

Suggested applications:

- Incontinence-associated dermatitis prevention and management
- Peristomal/Peritube skin protection
- Periwound skin protection
- Medical adhesive-related skin injury (MARS) prevention under dressings, tapes and negative pressure wound therapy (NPWT)
- Protection from moisture and friction (MASD)

Skin Care

3M™ Cavilon™ Advanced Skin Protectant

A waterproof barrier film for management of incontinence-associated dermatitis (IAD). Breakthrough technology for skin protection. It protects patients' skin — even under the most challenging conditions. Use this revolutionary, no-removal barrier solution to stop, reverse and prevent IAD. Long lasting barrier, protecting the skin for up to 7 days.

- The product's superior barrier performance allows/enables damaged skin to heal
- The protective barrier prevents, stops and reverses the effects of IAD
- Due to its ability to attach /adhere to wet, weeping (denuded) and/or dry skin and its exceptional barrier properties, the product does a superior job of protecting skin from irritants
- Protective barrier reduces pain associated with IAD and IAD care
- Forms a transparent coating on the skin

Suggested applications:

- Peristomal/Peritube skin protection
- Moisture/friction lesions

Skin Care

3M™ Cavilon™ Durable Barrier Cream Fragrance Free

A unique moisturizing barrier cream formulated with 3M polymers for patients at risk from Incontinence-Associated Dermatitis (IAD).

- Durable and concentrated
- Resists wash off — eliminates the need for frequent reapplication
- Allows tapes and dressings to adhere
- Concentrated — requires less frequent application and less product with each application than typical moisture barriers
- CHG compatible
- Hypoallergenic
- Contains dimethicone for skin protection

Suggested applications:

- Protecting at-risk skin from damage associated with incontinence
- Moisturizing severely dry skin

Adhesive Skin Closures

Adhesive Skin Closures

3M™ Steri-Strip™ Reinforced Skin Closures

The standard for wound closure and wound support.

- Provides wound support and assists in increasing the tensile strength of the wound compared to sutures^{1,2,3}
- Non-invasive design reduces scarring and the risk for infection as compared to sutures and staples, providing less tissue trauma and better cosmetic outcomes^{1,4}
- Sterile, breathable and comfortable to wear
- Hypoallergenic adhesive
- Permits early staple/suture removal^{1,2,3}
- Less expensive than skin adhesives, sutures or staples⁵

Suggested applications:

- Known for their versatility, Steri-Strip Reinforced Skin Closures are used in the closure of lacerations, surgical incisions and following early suture/staple removal

Adhesive Skin Closures

3M™ Steri-Strip™ Elastic Skin Closures

Designed to stretch and accommodate post-surgical edema, body movement and contours.

- Non-invasive design helps reduce scarring and the risk for infection as compared to sutures and staples, providing less tissue trauma and better cosmetic outcomes^{1,2}
- Soft, nonwoven backing for patient comfort
- Hypoallergenic adhesive
- Stretches with body movement or edema
- Less expensive than skin adhesives, sutures or staples³
- Sterile, breathable and comfortable to wear

Suggested applications:

- Steri-Strip Elastic Skin Closures are ideal for highly contoured areas, where musculoskeletal movement or edema is expected

Adhesive Skin Closures

3M™ Steri-Strip™ Blend Tone Skin Closures

Deliver wound support with a less noticeable look.

- Light color blends with many skin tones for a cosmetically pleasing appearance
- Sterile, breathable and comfortable to wear
- Non-invasive design helps reduce scarring and the risk for infection as compared to sutures and staples, providing less tissue trauma and better cosmetic outcomes^{1,2}
- Hypoallergenic adhesive
- Less expensive than skin adhesives, sutures or staples³

Suggested applications:

- Steri-Strip Blend Tone Skin Closures can be used when there is a need for a non-reinforced, gentle closure; It is barely noticeable and allows natural skin tone to show through, making it ideal for face and hand applications

Adhesive Skin Closures

3M™ Steri-Strip™ Antimicrobial Skin Closures

Small, but effective way to help reduce the risk of surgical site infections on patients.

- Product's iodophor adhesive has broadspectrum activity against the most common pathogens causing SSIs³
- Non-invasive design helps reduce scarring and the risk for infection as compared to sutures and staples, providing less tissue trauma and better cosmetic outcomes^{1,2}
- Excellent long-term adhesion
- Comfortable to wear
- Fast Application

Suggested applications:

- Steri-Strip Antimicrobial Skin Closures are ideal for use where additional antimicrobial activity is desired or for wound support following early suture or staple removal

Adhesive Skin Closures

3M™ Steri-Strip™ Wound Closure System*

Excellent cosmesis with 3M™ Steri-Strip™ Skin Closures combined with the bacterial and viral protection* of 3M™ Tegaderm™ Transparent Film Dressing.

- Waterproof barrier enables patients to shower
- Provides bacterial and viral protection**
- Quick and easy closure
- Non-invasive design helps reduce scarring and the risk for infection as compared to sutures and staples, providing less tissue trauma and better cosmetic outcomes^{1,3}
- Provides general wound support for increased tensile strength²
- Sterile, breathable and comfortable to wear
- May be worn up to 7 days

Suggested applications:

- Steri-Strip Wound Closure System* is conveniently packaged for arthroscopic surgeries and other applications; Ideal for wounds and incisions 2.5 cm or less

Disinfecting Port Protectors

Disinfecting Port Protectors

3M™ Curoso™ Disinfecting Cap for Needleless Connectors

Consistent use of Curoso disinfecting caps on I.V. needleless connectors is associated with decreased CLABSI. Curoso caps are alcohol-containing caps that twist onto ports for disinfection and protection. Each Curoso cap contains 70% isopropyl alcohol (IPA) which bathes the surface of the port and disinfects it in 1 minute.

- Disinfects in 1 minute — protects ports for up to 7 days if not removed
- Twists on easily and stays securely in place on commonly used needleless connectors
- Brightly colored to help clinicians verify and measure compliance
- Dispensed as individual caps or on a convenient ten-cap strip which can be hung from I.V. poles for easy access
- *In vitro* testing shows effectiveness against the six microorganisms commonly associated with CLABSI: *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Candida glabrata* and *Candida albicans*
- Meets 2016 Infusion Therapy Standards of Practice for add-on devices published by INS
- For single-use only

Suggested applications:

- Disinfect needleless connectors before line access
- Curoso disinfecting caps may be used in the home or a health care facility
- 3-year shelf life — please refer to product expiration date
- Use only on needleless connectors — do not use on open female luers

Disinfecting Port Protectors

3M™ Curos Jet™ Disinfecting Caps for Needleless Connectors

3M™ Curos Jet™ Disinfecting Caps are the next-generation solution for needleless connector disinfection. Meeting the high-efficacy standards of all Curos port protectors, Curos Jet disinfecting caps utilize 70% isopropyl alcohol (IPA) to disinfect all critical surfaces of needleless connectors. Consistent use of Curos disinfecting caps on I.V. needleless connectors is associated with decreased CLABSI.

- Disinfects in 1 minute — protects ports for up to 7 days if not removed
- Twists on easily and stays securely in place on commonly used needleless connectors
- Brightly colored to help clinicians verify and measure compliance
- A high profile makes the Curos Jet disinfecting cap easy to handle when wearing gloves
- Dispensed as individual caps or on a convenient five-cap strip which can be hung from I.V. poles for easy access
- *In vitro* testing shows effectiveness against the six microorganisms commonly associated with CLABSI: *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Candida glabrata* and *Candida albicans*
- Meets 2016 Infusion Therapy Standards of Practice for add-on devices published by INS
- For single-use only

Suggested applications:

- Disinfect needleless connectors before line access
- Curos Jet disinfecting caps may be used in the home or a healthcare facility
- 3-year shelf life — please refer to product expiration date
- Use only on needleless connectors — do not use on open female luers

Disinfecting Port Protectors

3M™ Curoso Tips™ Disinfecting Cap for Male Luers

This specially designed Curoso Tips disinfecting cap disinfects the critical surfaces and protects the distal end of I.V. tubing and other male luer devices.

Meeting the high-efficacy standards of all Curoso port protectors, Curoso Tips disinfecting caps utilize 70% isopropyl alcohol (IPA) to disinfect in 1 minute.

- Disinfects in 1 minute — protects ports for up to 7 days if not removed
- Twists on easily and stays securely in place
- Unique design shields excess alcohol from entering lumen while providing sufficient flow of alcohol precisely where it is needed — on the exposed exterior of the male luer
- Brightly colored to help clinicians verify and measure compliance
- Dispensed on a convenient five-cap strip which can be hung from I.V. poles for easy access
- *In vitro* testing shows effectiveness against the six microorganisms commonly associated with CLABSI: *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Candida glabrata* and *Candida albicans*
- Meets 2016 Infusion Therapy Standards of Practice for add-on devices published by INS
- For single-use only

Disinfecting Port Protectors

3M™ Curoso™ Disinfecting Caps for Tego® Hemodialysis Connectors

This specially designed Curoso disinfecting cap is compatible* with Tego® Hemodialysis Connectors.

- Disinfects in 1 minute — protects ports for up to 7 days if not removed
- Twists on easily and stays securely in place
- White Curoso caps for Tego® Hemodialysis Connectors are easily distinguished from green caps for dedicated use on the Tego® connectors
- *In vitro* testing shows effectiveness against the six microorganisms commonly associated with CLABSI: *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Candida glabrata* and *Candida albicans*
- Meets 2016 Infusion Therapy Standards of Practice for add-on devices published by INS
- For single-use only

Suggested applications:

- Disinfect Tego® Hemodialysis Connectors before line access
- Curoso disinfecting port protectors may be used in the home or a health care facility
- 3-year shelf life — please refer to product expiration date
- Use only on Tego® Hemodialysis Connectors

Disinfecting Port Protectors

3M™ Curoso™ Stopper Disinfecting Cap for Open Female Luers

Meeting the high-efficacy standards of all Curoso™ Disinfecting Port Protectors, Curoso stopper caps utilize 70% isopropyl alcohol (IPA) to disinfect the critical surfaces of open female luers, prior to line access.

- Disinfects in 1 minute — protects open female luers for up to 7 days if not removed
- Designed to luer lock onto a wide range of stopcocks and catheter hubs
- Unique cap design holds pressure to maintain a closed system
- Brightly colored to help clinicians verify and measure compliance
- Dispensed as individual caps or on a convenient five-cap strip which can be hung from I.V. poles for easy access
- *In vitro* testing shows effectiveness against the six microorganisms commonly associated with CLABSI: *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Candida glabrata* and *Candida albicans*
- Addresses stopcock contamination concerns highlighted in the 2016 Infusion Therapy Standards of Practice published by INS
- For single-use only

Suggested applications:

- Disinfect open female luers (such as stopcocks and catheter hubs) before line access
- Curoso stopper disinfecting caps may be used in the home or a health care facility
- 1-year shelf life — please refer to product expiration date
- Use only on open female luers — do not use on needleless connectors

3MSM Health Care Academy

3M Health Care Academy offers continuing education for healthcare professionals. This professional training and education resource is dedicated to helping you focus on deepening your expertise and improving patient care. Our education includes: Ambulatory Surgery, Auscultation, Edema Management, Hand Hygiene, I.V. Site Care, Patient Monitoring, Professional Development, Skin & Wound Care, Sterilization & Monitoring, Surgical Solutions.

On-Demand Education

Register for on-demand courses to meet your need for continuing education. See and hear industry experts discuss topics of interest to you.

Product Training

Our instructional videos help you make the most of 3M Medical products.

Live Events

Earn free continuing education (CE) credits through live webinars or in-person seminars. See and hear industry experts discuss topics of interest to you.

Resources

Connect to healthcare guidelines, in-service articles and more, all organized by profession.

Continuing Education Contact Hours

CE contact hours provided to nurses through the California Board of Registered Nursing. Nurse participants may receive CE credit upon completion of education modules unless otherwise noted.

Faculty

The faculty is recognized clinical and scientific experts who develop and deliver education exploring timely topics in a way that allows participants to apply the learning in their clinical practice. Current science and evidence is highlighted to support their teaching.
