

mesopeel® phenTCA

Professional Use Only

Self-neutralizing, medium-deep combined peel. Indicated for severe aging and acne scars. Medium-deep peel indicated for skin that has been previously prepared with superficial peels. Recommended for use by physicians with experience in medium-deep peel application.

ACTIVE INGREDIENTS

20% trichloroacetic acid (TCA)
10% phenol

mesopeel® melanostop tran3x, 50 ml / 1.69 fl. oz. pH 1.0

PROTOCOL

Prep - mesoestetic® hydra milk or mesoestetic® gel cleanser

1. Cleanse the skin with **mesoestetic® hydra milk or mesoestetic® gel cleanser** using circular and remove with warm water using facial sponges.
2. Tone entire area of treatment with **mesoestetic® hydra tonic** using gauze.
3. Degrease the skin with a professional solution using a gauze.
4. Protect the mucous membranes on the face (tear ducts, nostrils, and lips) using **mesoestetic® mesolips protector** or a **barrier balm**.

Method - mesopeel® phenTCA

1. Dispense **2-2.5ml** of **mesopeel® phenTCA** into a beaker (you may need more depending on the layers you choose to apply).
2. Apply **phenTCA** with a facial brush or gauze pad for thicker more resilient skin.
3. Wait 5 minutes, asking the patient their comfort level from **1 – 10** (the higher the number the more activity they feel. A fan may be used to reduce activity).
4. The application of subsequent layers may create a deep chemical exfoliation (papillary dermis/ reticular dermis) the number of layers to be performed will be always left to medical criterion. *** DO NOT NEUTRALIZE PEEL OR REMOVE WITH WATER – TCA** is a self-neutralizing acid.

Treat- mesoestetic® fast skin repair

1. Apply a generous amount of post procedure **mesoestetic® fast skin repair** and gently massage until absorbed.

Protect- mesoestetic® moisturizing sunscreen

1. Apply **mesoestetic® melan 130+ pigment control** or the **mesoprotech® SPF** your choice to the entire face and gently massage until fully absorbed.
