

Installation Instructions Witch's Well

The well piece is installed first with the two brackets (provided). Then the back wall piece is installed behind the witch. The large wall piece is installed last and is aligned with the witch's wall where the crown of the large wall sits underneath the well wall to hide the sharp edge of the metal. *If installing on the Ruby Red addition with the original castle walls, the back wall piece of the well set only has one bracket that attaches with a wood screw and a double stick tape to the side of the plastic wall.*
