# BLACKWATER SSRS EDITION

TUSENÖ  
CÖTEBORC

## The story of Tusenö

At Tusenö we have always known where to find our inspiration – the unique birthplace of Tusenö. The place we refer to is the Swedish west coast. A beautiful coastline filled with islands, fishing villages and above all – stories to be told.

The name, Tusenö, comes from the words "tusen öar", Swedish for "thousand islands". We choose this as a tribute to our home, as the coastline often is referred to as the coast with the thousand islands.

*– Passion, design and attention to details are all keywords to what today has become Tusenö –*

It's important to us that our passion for watches shines through in everything we do. One of our guiding principles at Tusenö is to create watches that not just pleases the eye for a brief second, but instead will keep you intrigued for years to come. A Tusenö will always be a classic, simple timepiece with subtle details and touches that gives you that little extra.

## BLACKWATER SSRS EDITION

---

It took around 4 years from the initial drawing until the Blackwater SSRS edition was delivered. A long process, but perfection takes time.

For us, Blackwater was a big step. Not only was it our first automatic watch, it also gave us the opportunity to create a watch in benefit of a great organisation that is close to our hearts. The Swedish Sea Rescue Society.

As owner of an Tuseño Blackwater SSRS Edition you are now a part of a small and exclusive group of people around the world. You are also an important help for the SSRS and their continuing mission of saving people on Swedish waters. Two things to be proud of.

## THE SWEDISH SEA RESCUE SOCIETY

---

In the early 1900's, Swedish sea rescue was in such a bad shape that it often was used as an international warning example.

In 1903, the Swedish coast line was ravaged by severe storms that caused the death of many people. The same year a world congress on sea rescue was held in Germany. There Sweden, together with Greece, was highlighted for particularly poor rescue service for shipwrecked mariners.

Participant in this conference was Swedish Albert Isakson, at the time a shipbuilding engineer at English Lloyd. Determined to do something about this poor situation, he traveled back home to Sweden to spread the word and make a change.

The Swedish government showed no interest in Albert's vision of an effective national sea rescue. Instead, he gathered private representatives of Swedish shipping for a meeting in Stockholm on June 1, 1907. After the meeting an organization had been formed - Svenska Sällskapet för Räddning af Skeppsbrutne (SSRS) or The Swedish Sea Rescue Society.

Ten years after the forming of the organization, in 1917 there were 4770 members and a total of 11 rescue vessels. Fast forward 100 years and those numbers have risen to 111.000 members and over 200 vessels of different kinds, but most importantly there are now 2319 rescue workers in the organization who constantly put their own lives at risk for the sake of others, totally voluntarily.

The Swedish Sea Rescue Society participates in around 80% of all sea rescue operations in Sweden, that's quite an extraordinary number.

## SPECIFICATIONS

---

Model name:	Blackwater SSRS Edition
Size:	Diameter 40,5mm   Lug to lug 50mm   Height 12mm
Weight:	200 gram
Origin:	Swiss Made – Designed in Sweden

Waterproof:	30ATM/300m
Lume:	BGW9 Swiss Super-LumiNova
Glass:	Domed Swiss sapphire crystal with AR coating
Bezel:	120 click uni-directional
Other:	Limited to 300 individually numbered pieces

## OPERATING INSTRUCTIONS

---

Blackwter is powered by the Swiss Sellita SW200-1 Automatic movement. Below is an overview of the functions of the movement.

To manually wind your movement, unscrew the crown (position 2 in the picture) and gently turn the crown clockwise until you feel a resistance. Do not continue winding at this point, this could damage your watch.

To set the time of your watch, simply pull the crown to position 4 and set the time correctly.

Make sure to always screw back the crown to position 1 before using the watch. Wearing your watch with the crown not correctly screwed in could damage your watch.

Movement: Sellita SW200-1

- Hour, minute and sweeping seconds hand
- Self-winding rotor with ball bearing
- Stop seconds/Hacking feature
- 28.800 vibrations per hour
- 38 hours power reserve
- 26 jewels

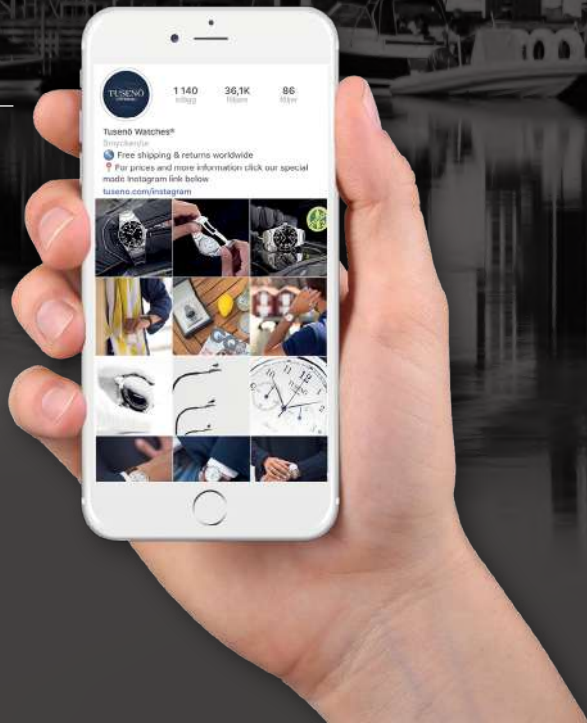

1. Screwed in position
2. Manual wound position
3. Date position (not applicable)
4. Time setting position
