LUME

BGW9 Swiss Super-LumiNova

STRAP 20MM

Flat top steel bracelet (diver clasp) +
Tropic rubber (pre-order only) +
Nato strap (pre-order only)

INSTRUCTIONS

Shellback is powered by the Ronda Mecano Calibre R150 movement. Here is an overview of the functions of the movement.

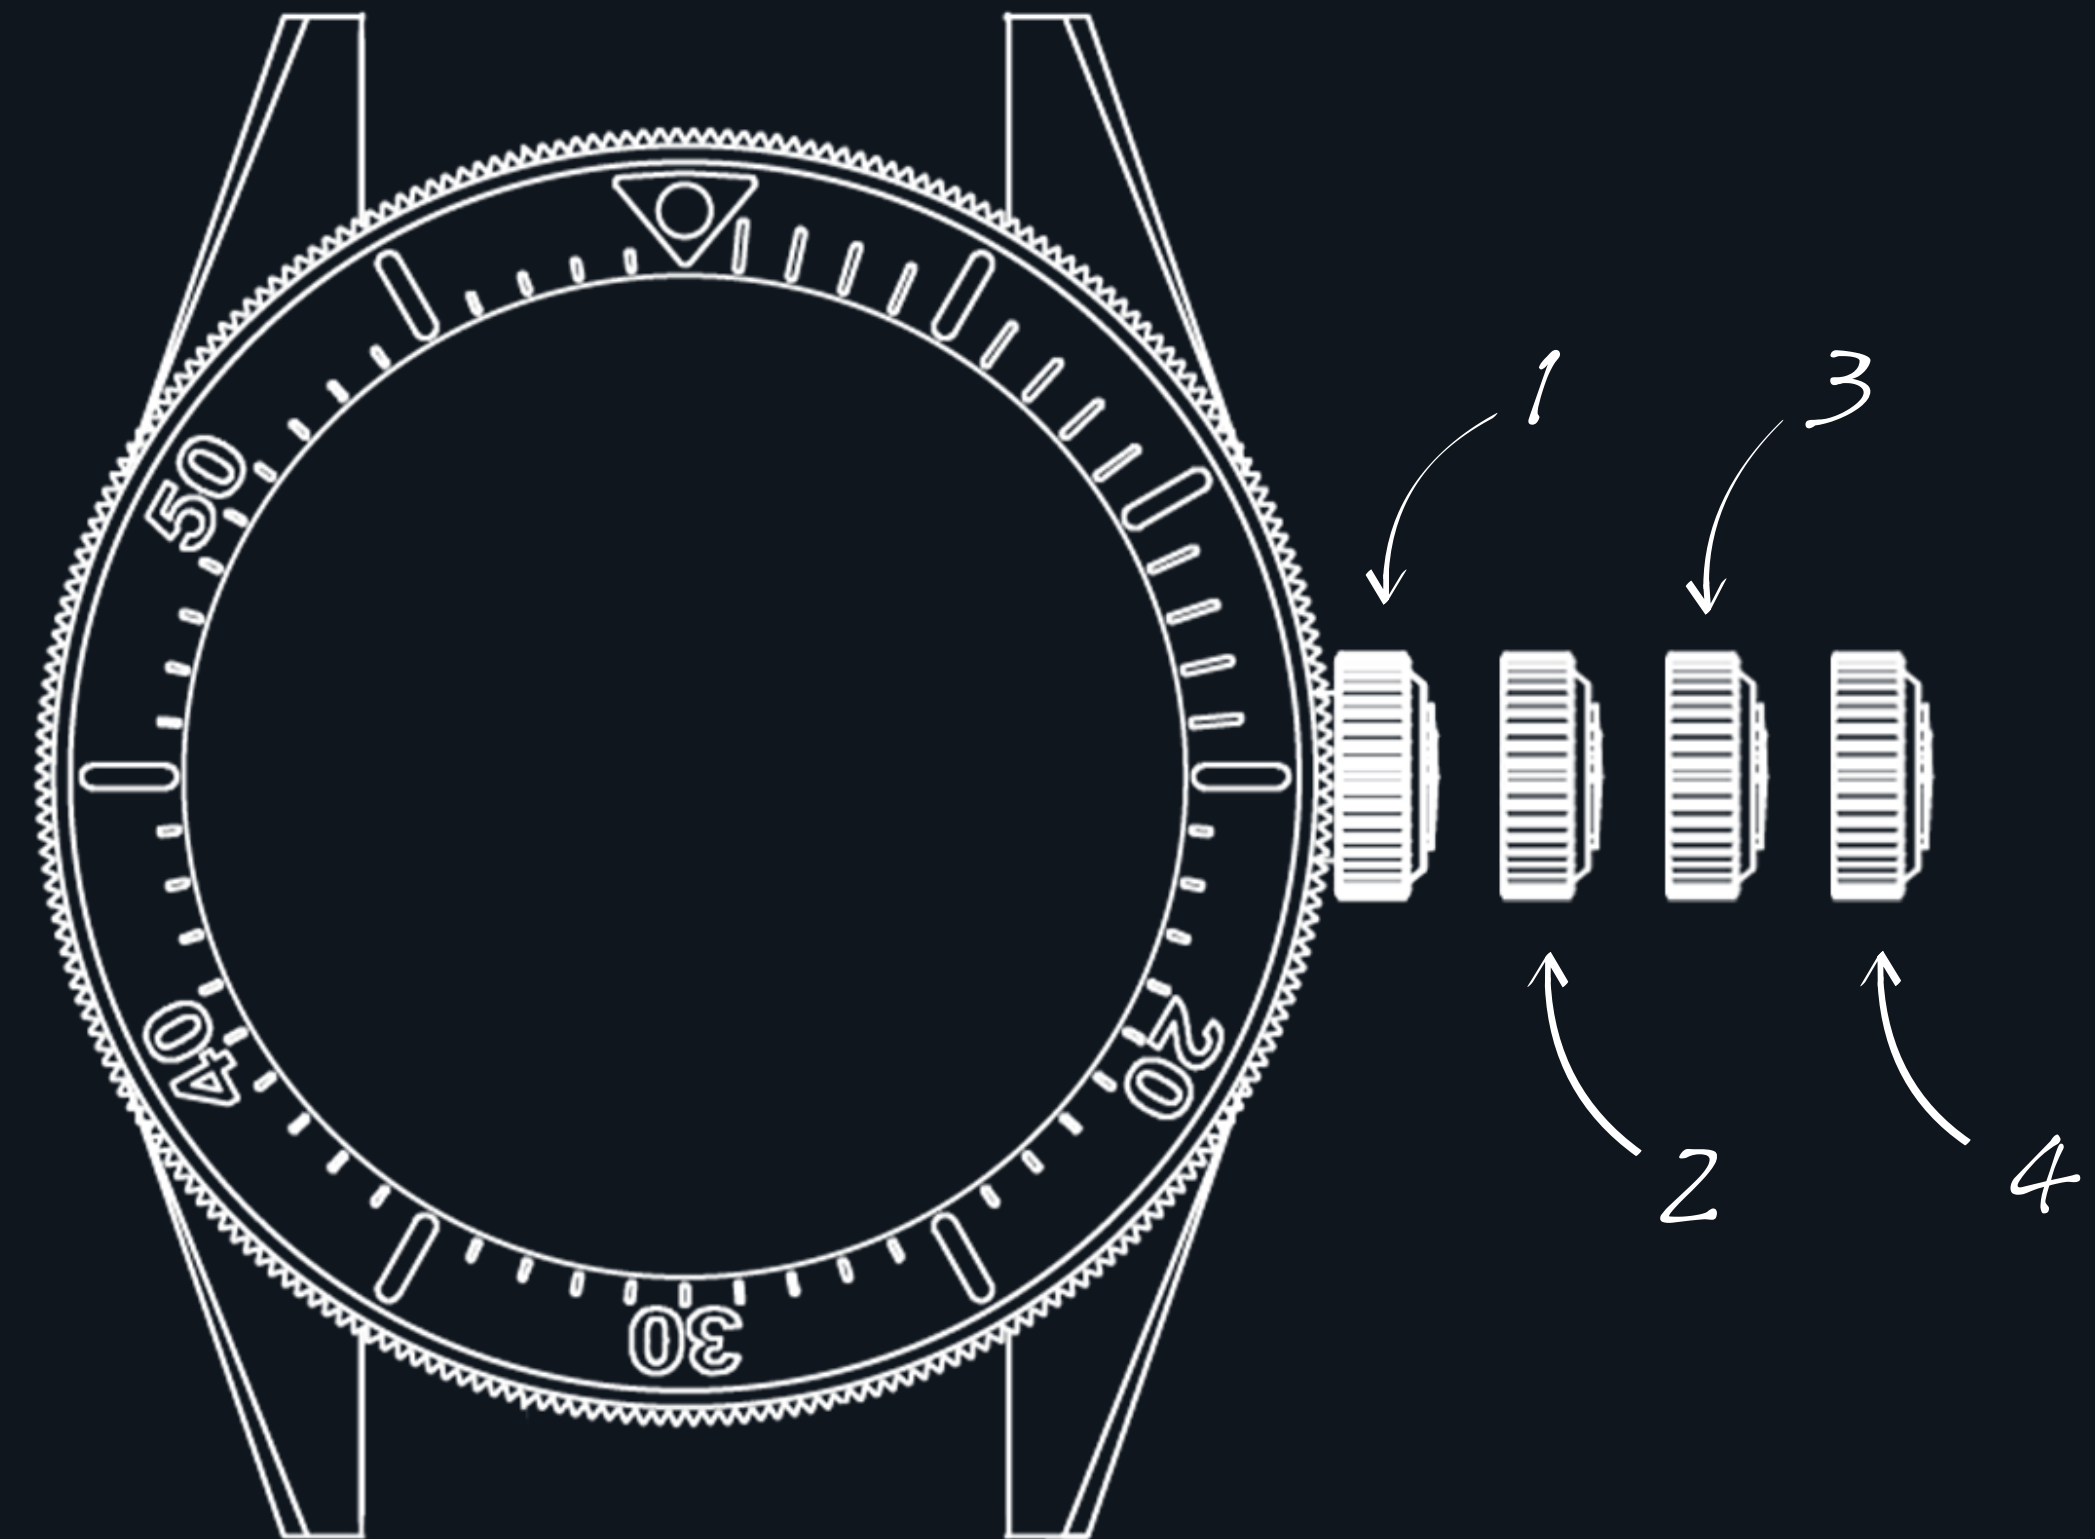

To manually wind your movement, unscrew the crown (position 2) and gently turn the crown clockwise (approx 25 winds) until you feel a resistance. Do not continue winding at this point, this could damage your watch.

To set the time of your watch, simply pull the crown to position 4 and set the time correctly. To set the date push it into position 3.

Make sure to always screw back the crown to position 1 before using the watch. Wearing your watch with the crown not correctly screwed in could damage your watch.

CROWN POSITION

1. Screwed in position
2. Manual wound position
3. Date setting position
4. Time setting position
