## Roll-Off Stop

Supplied on request on one or more sides of the table\*. It prevents load (hand pallet truck, trolleys etc.) from accidental fall when the table is lifted. It automatically rises when table starts lifting and automatically retracts when table is completely lowered.

**Important!** Consider 100 mm clearance between platform and lower frame necessary to fit every roll-off stop. Max length available 1300 mm.  
(\*Fitted on side FY)

According to Safety Standard EN 1570-1 5.4.2 where a platform is designed to carry wheeled loads (including trolleys, trucks for loading and unloading operations) or rolling loads, appropriate load retaining devices to prevent unintentional rolling off must be provided (roll-off stop).

These devices can be retracted only when the platform is in a safe position for the transfer of the load. In addition, means to prevent the falling of the operator must be considered.
