Gravity Roller Conveyor

It allows easy load transfers and connections with internal transport conveyors.

We recommend to always informing about goods length and weight for a correct dimensioning of the conveyors.

Important! It is necessary to prevent the fall of the load from the platform (Risk assessment according to EN-1570-1).

Load stop systems available on request:

- Removable with double position. To allow the load rolling on/off it is necessary to fit the plate in the deeper position (deeper cut in the platform)
- Bolted or welded type
