

## **Integral Side Shifters**

### **Models SH**

The integral side shift has been primarily conceived for fitting to the original fork lift truck by the OEM's.

The integral side shifter replaces the standard fork lift truck fork carriage, therefore the main advantage offered by this attachment is the lift truck residual capacity increase.

Bolzoni Auramo side shifts have exceptional strength combined with good technical features and performance. Several models and capacity ranges are available. Lower bearings available with self-lubricated pads or rollers.

Bolzoni Auramo is the leading supplier of integral side shifts worldwide.

### **Features:**

- Excellent visibility.
- Reduced weight, thickness and centre of gravity.
- Cylinder with double rods for equal side shift speed in both directions.
- Self-lubricating long life sliding pads.
- Option of twin rollers for electric trucks of reduced capacities.
- Very simple maintenance: for example, it is possible to remove the rods without disassembling the cylinder completely.
- Highly customized production to truck manufacturers requirements.
