## Low speed valve

Reduces lifting and lowering speed when placing the load

The low-speed valve is a perfect solution if tools or reels are to be placed very precisely in a machine or if the load on the pallet is fragile or very unstable.

### FACTS

- The lifting speed is reduced by 1/3
- The lowering speed is reduced by minimum 2/3, but can be adjusted individually
- The reduced lifting and lowering speeds are controlled by wireless or cable remote control.
- Ordinary lifting and lowering speed can still be used
- Factory fitting is recommended
