

If your child's foot exceeds the width of these brackets, consider a wide shoe size.

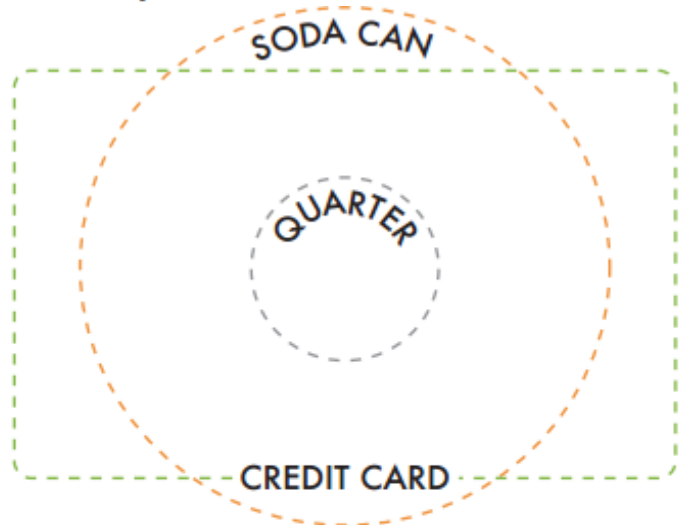

How to Use This Size Guide

This is a simple 3 step process for measuring your child's feet (We recommend doing the measurements on a flat surface).

1. Place your child's barefoot onto sizing chart with their right heel lined up with **HEEL GOES HERE** black line.
2. Then, measure! Draw a line in front of the longest toe.
3. Repeat with the left foot, again draw a line in front of the longest toe. And then you are finished!

Please measure both feet for an accuracy fit. If one foot is larger than the other, we recommend buying for larger foot. Look for the closest size that allows for 1/8" to 1/4" of extra room for your child's feet to move and grow.
