## FADE Eyebrow Pigment Color Chart

Color chart for easy *pigment* selection

The **FADE** Eyebrow Pigment Collection is ideal for artists and clients who want beautiful eyebrows without committing to a lifelong shape or color. **FADE** is a collection of inorganic, iron-oxide-based pigments designed to gently fade out of the skin. Clients can enjoy the convenience of tattooed eyebrows without a "forever commitment", allowing artists to easily refresh their clients' brows for years to come.

### Pro Tips:

#### COLOR CHOICE

Choose a color that provides the right amount of contrast against your client's skin tone by referring to our Fitzpatrick Skin Type Suitability Guide.

#### STRETCH

Maintain a firm 3-point stretch while tattooing in order for the pigment to penetrate the skin effectively.

#### TECHNIQUE

Focus on consistent tattooing movements to ensure a smooth and even deposit of pigment into the skin.

#### LAYER

Due to the pigment composition, you may need to apply several layers to build up the desired color.

#### PREVIOUS PMU

Previous PMU in the skin will impact the healed results.

#### MAINTENANCE

For optimal results, refresh your client's brows with a touch-up once they have faded by at least 50%.
