

ANCHORS

Condition of the webbing

Check along the entire length of the anchor that there are no cuts, traces of wear or burns. Do not forget to check at the level of the anchor buckles and under the adjustment buckle.

Condition of the stitching

Check that no threads are cut, torn, stretched, burnt or worn.

Condition of the anchor buckles and adjustment buckles

Look for any marks : look for the cause; sharp tools, impacts... This analysis will provide information on the history of the product. Beware there is no trace of wear or corrosion without forgetting the hidden parts.

Operation of the adjustment

Check that the webbing runs correctly in the buckle and test the jamming. If it does not run properly, clean the webbing and carry out the test again.
