

## SLEEP HOOD

### How to use the hood from the Back Carry Position

Please practice safe baby wearing at all times. These instructions are intended to supplement the Owner's Manual by serving as an online reference. For complete instructions—including warnings, limitations of use, and product care—please refer to the Owner's Manual provided with your carrier.

1. Grab one of the Hood Extension Straps and extend it straight up above your head.
2. Bring your other hand behind your head, grab the hood fabric near the Extended Strap and follow the seam to the other Extension Strap. Be careful not to tug too hard as it will unsnap the hood from the carrier. With one strap in each hand, extend the hood over your sleeping child's head.
3. Fasten the Extension Straps, at a comfortable length, to the snaps on the carrier shoulder straps. There are two snaps on each shoulder strap to accommodate two hoods when using the Dual Carry Position.

**NOTE:** For babies younger than 4 months, the hood can be used to provide additional head and neck support, if needed. Keep the hood attached to the carrier, roll it multiple times and place it inside the carrier behind the baby's neck. Adjust the rolled hood until the baby is supported and breathing normally.
