

ATTACHMENT SHOULDER STRAPS

Please practice safe baby wearing at all times. These instructions are intended to supplement the Owner's Manual by serving as an online reference. For complete instructions—including warnings, limitations of use, and product care—please refer to the Owner's Manual provided with your carrier.

ATTENTION: The Attachment Shoulder Straps should only be used with the TwinGo Attachment Carrier for single-carry positions with one child. Do NOT use Attachment Carrier Safety Belt while Attachment Shoulder Straps are in use.

1. Lay down your Attachment Shoulder Straps with the logos facing up; buckle the chest strap to ensure and maintain proper positioning.
2. Lay down the TwinGo Attachment Carrier directly below the Attachment Shoulder Straps with the pocket and logo facing up.
3. Pull back the fabric of the left Attachment Shoulder Strap to expose a large female buckle. Guide the left male buckle on your Attachment Carrier into the exposed shoulder strap buckle. Give a tug on the buckle to ensure connection is secure. Wrap the Safety Elastic around the buckle and thread the strap completely through the elastic. Repeat for the right-side buckle.
4. Thread the small male buckle on the left Attachment Shoulder Strap through the Safety Elastic located on the left side of the Attachment Carrier's pocket. Fasten the buckle and tug to ensure connection is secure. Pull the excess strap through the Safety Elastic. Repeat for the right-side buckle.
