

SINGLE BACK CARRY POSITION

Please practice safe baby wearing at all times. These instructions are intended to supplement the Owner's Manual by serving as an online reference. For complete instructions—including warnings, limitations of use, and product care—please refer to the Owner's Manual provided with your carrier.

ATTENTION: This carry position is only intended for one child using one carrier. Child must face inward and have strong and consistent head control.

1. Thread the Waist Buckle through the Waist Belt Loops of your Base Carrier. With the warning label touching your stomach, wrap the padded waist and straps around your waist and fasten the buckle. Wrap the Safety Elastic around the Waist Buckles. Slightly loosen the shoulder straps and waist strap to accommodate rotating.

2. Rotate the carrier so the body of the carrier is on your right hip but still behind you. Place your child on your right hip facing you and centered over the carrier. While holding your child with your right arm, use your left arm to bring the carrier up and against your child's back. Reposition your right arm so your hand is on the outside of the carrier.

3. While your child is still supported with your right arm, lean forward slightly, reach back with your left arm and place your entire arm through the left shoulder strap. If you cannot reach the strap, it was not loosened enough during Step 1.

4. While still holding the child with your right arm, use your left arm to reach across your body and pick up the right shoulder strap; the child should be secure in the carrier. Then place your right arm through the shoulder strap.

5. Lean forward, with both hands carefully rotate the carrier so your child is centered on your back. Your child should be seated low in the carrier, his head upright and not slumping.

6. Stay leaning forward, with your right hand hold the left shoulder strap and use your left hand to tighten the nylon strap by pulling straight back. Switch hands to adjust the right shoulder strap. The carrier should be snug enough to provide proper back support for your child. If it is too loose, your child will slump or lean backward. Be careful not to overtighten.

7. Buckle and tighten the Chest Strap to ensure shoulder straps are securely positioned on both shoulders. Tighten the Waist Belt for a snug fit with no gaps.
