KNOW THE OPTIONS
for your next hunt!

The Day6 PlotWatcher Time Lapse HD Video Camera records up to 84 hours of activity at a potential hunting location onto a USB drive. All of the activity can then be reviewed in just a few minutes, using the included GameFinder video player software.

PlotWatcher Time Lapse HD Video Camera User Manual
Thank you for purchasing the PlotWatcher Time Lapse HD Video camera. The PlotWatcher TLV camera is a breakthrough scouting tool. Mounted at your potential hunting locations, it records HD video of all the activity that happens in the days before you hunt. Images are taken every 5 or 10 seconds from dawn until dusk, producing an HD video you can review with the GameFinder video player software. Let’s get started.

Minimum Requirements to install and run the software
Windows XP and above.
How to set up your PlotWatcher Time Lapse HD Video Camera

1. Remove the PlotWatcher TLV camera from the package.
2. Open up the PlotWatcher TLV camera by placing it Lens side down on a flat surface, or Lens side down in the palm of your hand, and remove the battery door by pulling open the latch.
3. With the wheel in the middle of the camera, you can choose between one of seven operating programs. Simply rotate the wheel with your finger left or right to choose the desired setting.
4. Insert a USB flash drive (4 or 8 GB) and 4 AA batteries, and replace the rear cover. Your PlotWatcher TLV camera is now ready for you to set the time and date using the Gamefinder video player software. **Note: PlotWatcher TLV will not function properly with a USB drive larger than 8 GB.**

The Time Interval and Midday Skip* Program Options:

<table>
<thead>
<tr>
<th>Wheel position</th>
<th>Time Interval and Midday Skip Option</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>10 second interval / No midday skip</td>
</tr>
<tr>
<td>2</td>
<td>10 second interval / 4 hour midday skip</td>
</tr>
<tr>
<td>3</td>
<td>10 second interval / 8 hour midday skip</td>
</tr>
<tr>
<td>4</td>
<td>5 second interval / No midday skip</td>
</tr>
<tr>
<td>5</td>
<td>5 second interval / 4 hour midday skip</td>
</tr>
<tr>
<td>6</td>
<td>5 second interval / 8 hours midday skip</td>
</tr>
<tr>
<td>7</td>
<td>Custom**</td>
</tr>
</tbody>
</table>

*Midday Skip is a feature that stops recording of HD Video during the middle of the day for a specified time. This conserves battery life, extending the number of days the PlotWatcher TLV camera will operate before the batteries must be replaced. Midday skip begins 4 hours after daybreak, and extends for the specified duration.

**To modify the custom settings for wheel position 7, use the “Settings” option in the GameFinder software and follow the instructions.

Mounting Hole
Mounting your PlotWatcher

To set your PlotWatcher TLV camera on the mounting stake, screw the mounting stake clockwise into the hole on the bottom of the camera. (See diagram above)

To set your PlotWatcher TLV camera on any standard tripod, screw the tripod clockwise into the hole on the bottom of the camera.

To attach your PlotWatcher TLV camera directly to a tree, use the enclosed bungee straps to restrain the camera just below the lens.
PlotWatcher TLV Camera Operation

Check to see you have 4 AA batteries installed and a 4 or 8 Gb USB Flash Drive installed as described under “Camera Setup”.

To turn ON the PlotWatcher TLV camera, press and hold the grey power button on the front of the camera until the green LED lights up. All LEDs will then flash, with an audible beep, about once per second for 5 times to indicate that POWER UP is successful.

To turn OFF the PlotWatcher TLV camera, press and hold the grey POWER button on the front of the camera until the green LED lights up. All LEDs will then flash, with an audible beep, several time per second for 3 seconds to indicate that the POWER DOWN is successful.

On the front of the PlotWatcher TLV camera, above the lens, there are three LED lights. These LEDs allow you to monitor the status of the PlotWatcher without having to move the camera from its mounted position. Each event and status is represented by the LED lights:

<table>
<thead>
<tr>
<th>Action</th>
<th>LED Light and Audible Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Up</td>
<td>All 3 LED lights flash, with audible beep, on a 1 second cycle for 5 seconds.</td>
</tr>
<tr>
<td>Power Down</td>
<td>All 3 LED lights flash, with audible beep, on a ¼ second cycle for 3 seconds.</td>
</tr>
<tr>
<td>Picture Taken (5 or 10 sec. interval)</td>
<td>Green “Power” light illuminates when each picture is taken.</td>
</tr>
<tr>
<td>Low Battery (During Operation)</td>
<td>Red “Battery” LED illuminates along with Green “Power” LED when each picture is taken until batteries are out of power at which time the camera powers down.</td>
</tr>
<tr>
<td>Low Battery (At Power Up)</td>
<td>Red “Battery” LED illuminates, with audible beep, for 3 seconds and then PlotWatcher powers down.</td>
</tr>
<tr>
<td>No USB Drive (Or Incompatible)</td>
<td>Blue “Memory” LED illuminates, with audible beep, for 3 seconds and then PlotWatcher powers down.</td>
</tr>
<tr>
<td>Sleep Mode (Night or Midday)</td>
<td>No LEDs illuminate during Sleep Mode. When POWER button is depressed while in Sleep Mode, the POWER DOWN sequence will occur. Press POWER again to restart the camera.</td>
</tr>
</tbody>
</table>
Installing the GameFinder software

1. Insert the PlotWatcher TLV camera CD into your computer.
2. If Windows does not auto-open the CD to reveal the “GameFinder_Setup” icon, then browse to the CD drive using “My Computer.” Once you see “GameFinder_Setup” in the Explorer window, proceed to the next step.
3. Double Click on “GameFinder_Setup” to start the setup program.
4. Click NEXT for each of the steps of the GameFinder Installer Wizard. Note: For Vista and Windows 7, you may have to click “yes” or “allow” when asked if you wish to “allow an unknown publisher to make changes to this computer.”
5. Installation is complete. The GameFinder video player software is installed under “All Programs” in the “Day6” folder, and a shortcut is also placed on the desktop. You can now proceed to setting the Time, Date, and Custom Settings.

Setting the Time, Date, and Custom Settings on your PlotWatcher TLV Camera

To set the time, date, and custom settings, the GameFinder software will write a settings file, based on your preferences, to your USB flash drive. You will then move the flash drive to the PlotWatcher TLV camera, and power up the camera. The PlotWatcher then recognizes the setup file, loads the values, and powers down, ready for use with the new settings. The following are the step by step instructions:

1. Insert the 4 or 8GB USB drive you plan to use with your PlotWatcher camera into your PC. Note the Drive letter assigned by Windows to the USB drive so that you can specify this drive on step 4.
2. Run the GameFinder software. (Use desktop shortcut, or select from “Start->All Programs -> Day6->GameFinder”)
3. Click on the Settings button
4. On the Settings form, Click on “Camera Settings”
5. On the Camera Settings form, set “USB Drive” to correspond to the drive letter for the USB drive you noted in step 1. Set the Time and Date to the values you want programmed into PlotWatcher. Make any changes to the Custom Settings that you prefer. Click “OK”. Note: the remaining steps are the same as the ones outlined on the “Camera Settings” form.
6. Safely remove the USB from the PC. (First, click on the device icon in your menu bar tray and select “Safely remove USB storage.” Then, physically remove the device from the PC).
7. Insert the USB into the PlotWatcher.
8. Turn on the PlotWatcher so that it can read the setup file.
9. Confirm that setup is successful: PlotWatcher TLV camera will beep 3 times and power down after successful setup.
10. PlotWatcher is now ready for operation with the new settings.
Managing Time Lapse Video files

The PlotWatcher TLV camera records one HD video file for each day of operation. Each daily file uses around 300Mb of disk storage space. When the USB flash drive begins to fill up (about 10 days on a 4 Gb drive, or 20 days on an 8 Gb drive), the oldest file will be deleted to make room for the newer file. This way, you always have the most recent time lapse video available to review, even if you have collected more video than your USB drive will hold.

The files are stored on the USB flash drive in the folder “\DCIM\100_D60.” When you insert the USB flash drive, browse to this folder and you will see a list of your time lapse video files. Double click on a file to launch the GameFinder software and begin reviewing.

When you have reviewed the first file, you can close the GameFinder video player and double-click on the next file, or you can use the “File” button to open your next file.

TIP: By having two USB flash drives, you can swap an empty one for a full one in the field. Due to the large file sizes, you may not want to copy the full time lapse video onto your PC – consider exporting only the interesting shorter clips from the GameFinder player. Use the “Export” options on the “File” form to save images or short clips of interesting activity onto your PC. After you review your time lapse video and save any interesting images or clips, delete the files from the flash drive to have it ready for swapping in the field.

GameFinder video player software

The GameFinder video player is an easy, fast and fun way to view time lapse video files.

The quickest and easiest way to get an overview of a time lapse video is to use your mouse to drag the “Position Arrow” across the play bar (this is the triangular indicator with the frame number displayed in it). This will show, in a very quick time, what is contained in the file. You can drag to the right to move forward in time, or to the left to move backward in time.

When you see an interesting portion of the file, stop dragging the Position Arrow and use the scroll wheel on your mouse to move forward or backward one frame at a time. If you don’t have a scroll wheel on your mouse, you can use the arrow keys or just click on the back or forward STEP button.
To see every single picture, and ensure you do not miss any frames, you can play the file like a traditional video. Just click on the back or forward PLAY button to begin. Clicking again will speed up the play, up to 5x by clicking several times (After 3x, some frames may be skipped). At any point if you see something of interest, click on the video screen or scroll the mouse wheel to pause the video and enter step/scroll mode.

SEARCH will cause GameFinder to search in the direction of interest (forward or backward) for motion and will move the “Position Arrow” to the frame in the video file where movement is detected. A vertical line is drawn on the play bar at each point where movement is detected. If the search feature is too sensitive, and you are finding shadows or trees that are moving, use the SETTINGS button to limit the region of the field of view that is searched, or limit the sensitivity. The settings for the motion search can be found under the SETTINGS button.

For additional tips and to get the latest information on the GameFinder video player, visit www.day6outdoors.com. For support, contact us at support@day6outdoors.com. Thank you for using the PlotWatcher TLV camera and GameFinder software!
