Manual Screw Cap Sealers

Device to apply the tamper-evident ring seal at the base of PRE-THREADED metal screw caps.

Version 1 models are easy to use, twin-lever machines, but each machine is specific for one size of cap only (31.5mm versions can do 18 or 24mm high caps: 'oil' caps with or without pourer inserts)

Version 2 is robust and gives an excellent finish, easily adjustable for different cap heights and a range of cap diameters, but slower to use.

Caps must be applied by hand, or using a tightening device, before using the sealer, and must be matched to the bottle so sufficient tamper-strip is available for crimping.

Speed 300-800 bottles per hour.

Example prices:

Version 1a Manual Cap sealer for 18 x 11mm caps	£155
Version 1b Manual Cap sealer for 28 x 15mm caps	£155
Version 1c Manual Cap sealer for 31.5 x 18/24mm caps	£155
Version 1d Manual Cap sealer for 22 x 15 caps	£155
<i>Other sizes may be available</i>	

Version 2 Manual Cap sealer ADJUSTABLE 18 – 35mm	£225
<i>Note these are supplied with two sizes of wheel, easily swapped over to allow use of caps 18-28 and 24-35mm.</i>	

Prices exclude delivery and VAT

Version 1

Version 2

NOTE
For a superior seal using plain (unthreaded) caps, use our ROPP capping machine
