

# LIQUID SOLUTIONS

EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. PR-15

Date: 10/10/22

## Inline Strainer

High quality strainers with superior wedge-wire elements in 316 stainless steel, more robust, precise, and easier to clean than perforated or mesh types.

Unlike cheaper in-line versions, the 90-deg configuration allows removal of the strainer element without breaking pipe connections. There's a choice of removal ratings: 50, 100, 250, 500 or 1000 micron.

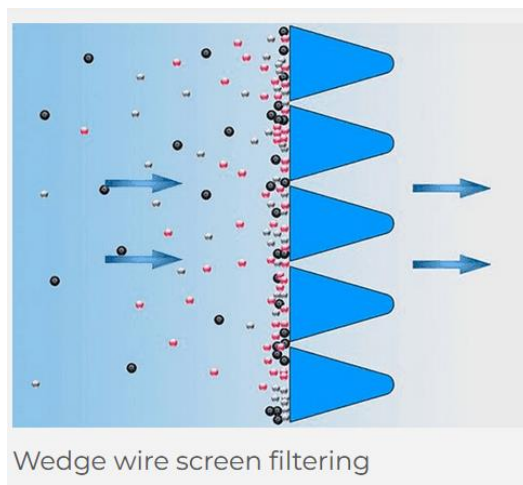

Note: flow is outside-to-in: side-branch inlet, outlet at the bottom. Standard connections are 1.5-inch Triclamp

Other types may be available: please contact us for more information.
