Filling/Emptying Wands

Stainless pipes with valves, for convenient connection to hoses/pumps used for filling or emptying containers or tanks. All are 1.5" Triclamp inlet (Can convert to other fittings, RJT etc) and 1" hoesetail outlet (or can add Triclamp etc.)

Type A: simple 'filling gun' suitable for barrels, drums, jerricans etc. Depressing the trigger allows liquid to flow. Push-button to lock in 'open' position Tube length 240mm. / diameter 28mm.

Type B1: barrel filling device: push bung in firmly to seal, depress trigger to fill (can be locked in position). When full, liquid overflows through side-branch. Fill level is adjustable. Length 160mm. / diameter 32mm. Bung diameter 44 to 52mm.

Type B2: barrel filling/emptying device (typically used for 225l. 'barriques'): tighten handle to expand bung and seal. Depress trigger to fill (can be locked in position). When full, liquid overflows through side-branch. May also be used to EMPTY barrels by applying gas pressure through side-branch. Tube diameter 22mm. Standard length 800mm., but others available to order. Bung diameter 44 to 52mm.

Type C: barrel /drum/cask filling device: depress trigger to close (can be locked in position). The valve seal is right at the end of the pipe, minimising aeration and dripping when moving to a new container. Tube diameter .Standard length 1,150mm but others available to order.

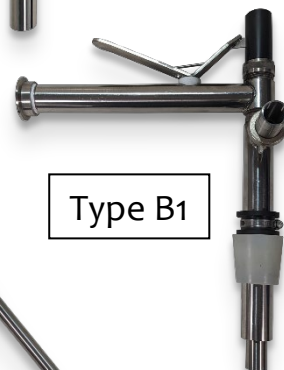

Example prices:

Type A	£175
Type B1	£225
Type B2	£330
Type C	£315
