

LIQUID SOLUTIONS

EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. **RI – 01**

Date:30/03/23

Two/Four head manual bottle rinsers / blower

Designed to guard against foreign bodies like glass fragments, cardboard, hairs, insect parts, NOT to clean and sterilise dirty bottles!

Two or four spring-loaded nozzles in a stainless sink unit. Bottles are rinsed by pushing them down over the nozzles. May be fed with water from the mains supply, sterilant or alcohol via an optional pump, or used as a 'blower' with inert gas (e.g. nitrogen / CO₂) or compressed air.

A filter for the rinse fluid is recommended. Food safe construction, mostly in stainless. Nozzles may be individually plumbed in to provide different rinse fluids, e.g. sterilant + water.

Four nozzle version allows bottles to be left inverted on one pair, for extra drain time.

Speed 500 – 1500 bottles per hour
