COMBINED FEATURES

Very low viscosity for rapid saturation of fibreglass, Kevlar and carbon fibre laminate with resin infusion and VARTM processes.

Fast cure speed hardener provides approximately 75 - 90 minutes of working time at 25°C. A typical laminate will be gelled in 2 to 3 hours.

This combination is formulated specifically for resin infusion and VARTM processes. Do not use in open mould applications.

Room temperature cure properties suitable for many composite components and structures.

Tg as high as 92°C with proper post cure providing excellent temperature stability and great part cosmetics.

Cost Effective - High Performance epoxy formulation for synthetic composite manufacturing.
